Chapter 5 explores alternative approaches for defining, teaching, and measuring broad technical skills and highlights issues that should be considered in moving toward assessments that meet needs identified by Congress. One appendix lists legislative milestones related to accountability in federal vocational education programs. Another appendix explains acronyms. (YLB)

Writing at the time of Napoleon's greatest campaigns, Prussian soldier and writer Carl von Clausewitz created this landmark treatise on the art of warfare, which presented war as part of a coherent system of political thought. In line with Napoleon's own military actions, he illustrated the need to annihilate the enemy and make a strong display of one's power in an 'absolute war' without compromise. But he was also careful to distinguish between war and politics, arguing that war could only be justified when debate was no longer adequate, and that if undertaken, its aim should ultimately be to improve the wellbeing of the nation.

The book is based on nine selected, peer-reviewed papers presented at the 10th biennial Networked Learning Conference (NLC) 2016 held in Lancaster. Informed by suggestions from delegates, the nine papers have been chosen by the editors (who were the Chairs of the Conference) as exemplars of cutting edge research on networked learning. Further reviews of all papers were conducted once they were revised as chapters for the book. The chapters are organized into two sections: 1) Situating Networked Learning: Looking Back - Moving Forward, 2) New Challenges: Designs for Networked Learning in the Public Arena. Further, we include an introduction which looks at the evolution of trends in Networked Learning through a semantic analysis of conference papers from the 10 conferences. A final chapter draws out perspectives from the chapters and discusses emerging issues. The book is the fifth in the Networked Learning Conference Series.

The contributors are recognized authorities on the party systems of their countries, and have all been involved in gathering data on party membership, party finance and the internal structure of power. They add to the analysis of these original data an expert knowledge of the wider political patterns in their

What does Congress do? How does it do it? Why is it such a complicated institution? This concise primer offers students and general readers a brief and systematic introduction to Congress and the role it plays in the US political system. Drawing on his experience as a former Congressional staff member, the author explores the different political natures of the House and Senate, examines Congress's interaction with other branches of the Federal government, and looks ahead to the domestic and foreign challenges that are likely to drive the Congressional agenda for decades to come. The book provides revealing insights into the sometimes-contradictory Congressional responsibilities of representation and lawmaking; oversight and appropriation; and managing and organizing the government. It includes a case study (on the formation of the Department of Homeland Security) that sheds light on Congress's often-complicated procedures. The book also includes boxed features on Congressional action - highlighting such topics as file sharing and student loans - that show students how Congress's work affects their lives. Chapter-ending lists of web resources add to the book's usefulness.

This book is the final outcome of VECPAR 2000 - 4th International Meeting on Vector and Parallel Processing. VECPAR constitutes a series of conferences, which have been organized by the Faculty of Engineering of the University of Porto since 1993, with the main objective of disseminating new knowledge on parallel computing.
