Setting up quality processes for your next construction project comes down to establishing two tracks: quality assurance and quality control. Quality assurance, or QA, doesn't just examine the end result of a project, it takes a process-oriented approach. QA regards the planned and systematic activities executed in the course of a job to fulfill the project's quality requirements.

Construction Quality Assurance and Quality Control is the student of the principles of the construction quality management. It begins with carefully developed project requirements adhere to by the contractor, the owner and regulating agencies.

Quality assurance is a set of planned and systematic actions to ensure that products and services comply with specified requirements. It not only involves checking the final quality of products to avoid defects, as is the case in quality control, but also checking product quality in a planned way in all the production stages.

[Quality Assurance \(QA\) And Quality Control \(QC\) On ...](#)

At a high level, quality assurance covers activities from design, development, production and installation and is designed to ensure your customers 'know' your work will be quality; while quality control is more focused on monitoring the actual quality of finished products through objective measurements and numbers.

[Construction Quality Control Quality Assurance](#)

Quality Assurance (QA) and Quality Control (QC) sound very similar but describe two different parts of the quality management process. In construction, QA and QC are not only done by different parties but also at different times and with different goals. Still, both concepts are often mixed and confused.

[Quality Assurance and Quality Control in construction](#)

Simply quality assurance makes sure that you are doing the right things in the appropriate way while quality control is making sure that the results of what is done to meet the set standards. Quality assurance is connected to a working interaction between each contractor on site while quality control deals with the inspection of the outcome of this work.
