ROAD DESIGN 3.1 Horizontal and Vertical Alignment . Center line alignment influences haul cost, construction cost, and environmental cost (e.g., erosion, sedimentation). During the reconnaissance phase and pre-construction survey the preliminary center line has been established on the ground.

Construction planning is more difficult in some ways since the building process is dynamic as the site and the physical facility change over time as construction proceeds. On the other hand, construction operations tend to be fairly standard

from one project to another, whereas structural or foundation details might differ considerably from one facility to another.

Selecting the Construction Team; Once the site where the building project is intended to construct is chosen, the expertise of engineers and architects are taken to develop the site and the building plan. Sometimes, an appropriate site is selected after the building layout is prepared.
