Information about containment facility design traditionally has been scattered throughout the literature or maintained in files and reports kept by national quarantine services or research organizations that develop and use these facilities. With the globalization of trade, it has become necessary for all parties to upgrade existing facilities and services to ensure the safe import and export of agricultural products. This book brings to light containment safeguards from important international facilities in 12 countries. With the publication of

this comprehensive volume, Kahn and Mathur fulfill the need to synthesize and make available to a large audience, information about principles, concepts, data, and guidelines relating to the design and function of a wide spectrum of containment facilities and safeguard procedures.

The International Atomic Energy Agency has had a leading responsibility in preventing the spread of nuclear weapons and misuse of materials intended for nuclear energy across the world. Originally published in 1987, in the wake of the Chernobyl disaster of 1986 which proved the utmost importance of the agency, Scheinman explores the function of the IAEA and

the challenges it faced. This report also lists ways that the agency could be strengthened touching on topics such as leadership roles, support for safeguarding functions and prevention from the agency being overwhelmed by international and national political issues. This title will be of interest to students of Environmental Studies.
