"In this project Randall Bezanon examines judicial interpretations of free speech by means of a broad range of Supreme Court cases, arguing that over the past 15 years the Court has engaged in a truly revolutionary expansion of the reach of the free speech guarantee. The cases include the much-discussed Citizens United decision which granted the full measure of constitutional protection to speech by corporations; the Doe v. Reed case from Washington State that recognized the acts of signing petitions and voting in elections as acts of free speech; the Summum decision holding that the decision to select a monument for a public park and to reject another based on the government's disagreement with the monument's message is an act of government speech immunized from challenge by the First Amendment; and the Hurley and Dale cases that recognized free speech claims for messages and meanings that arose "out of thin air": speech without an author (a parade); and an author without a message (the Boy Scouts). As in earlier books on freedom of the press and of religion, Bezanon aims to arm the reader with the capacity to reach her or his own decision about whether the Court's conduct befitted the independent judicial branch and the consequences of its decisions for a representative democracy"--

As the world of work and jobs is more uncertain than ever because of various trends impacting it, including the rise of robotics and the gig economy, Cooperatives and the World of Work furthers the debate on the future of work, sustainable development, and the social and solidarity economy of which cooperatives are a fundamental component. Throughout the book, the authors, who are experts in their respective fields, do not limit themselves to praising the advantages of the cooperative model. Rather, they challenge the narrow understanding of cooperatives as a mere business model and raise debate on the more fundamental role that cooperatives play in responding to social changes and in changing society itself. The book is unique in tracing the historical connection between cooperatives and the world of work since the end of the First World War and the recent shifts and restructuring in enterprise and the workplace. It presents a redefinition of the very concept of work, focusing on organizational innovation. This book is published in recognition of 100 years of the International Labour Organization, and gathers together research from leading experts who were brought together at an event co-hosted by the International Co-operative Alliance (ICA) and the International Labour Organization (ILO).

A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series ([www.makingsenseofdata.com](http://www.makingsenseofdata.com)) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, Making Sense of Data II is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could help their organization.

This is an account of the dramatic events leading to the reunification of Germany. The author looks into the complex intertwining of popular action, national politics and international moves that culminated in the historic events of 1989. After providing a brief historical background, the author analyzes the sequence of events in East Germany, the interplay between East German discontent and Bonn's policies, and Chancellor Kohl's role in mobilizing domestic and international support for reunification. Paying special attention to the attitudes and actions of other powers, particularly Russia, the author provides a detailed look at the decisive negotiations with Gorbachev that cleared the way for German reunification. God created animals with everything they needed. To be content and succeed, He designed homes perfectly suited to each one. However, the animals were unhappy with the places that God had made for them and eventually gave into the insecurities and fears they all felt. Owl was frightened of the dark, Mountain Goat became faint-hearted as he looked down from the narrow mountain ledge. Duck panicked every time she neared the water. Camel detested the hot, dry wind and Penguin hated the icy cold. Through whimsical illustrations and creative prose, "God Gave Me Everything I Need To Be Me!" encourages self acceptance, individuality and appreciation as the animals finally realize God had given them exactly what each one required to make them complete.

Bright, sociable, and on the verge of moving in with his beautiful girlfriend, Kathryn, Leo Fisch has a brilliant future ahead of him; outwardly at least, he seems happy. Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the

realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.
