Orthodox is obsolete; conventional is kaput. We thought we knew how we make economics, politics, technology and nature work for us. But increasingly, they are failing to run by the rules and systems we've honed over recent decades. Boom-bust economies, fractured and destructive politics and a deeply degraded ecosystem are just some of the symptoms. Pioneers around the world are seeking new values, systems and technologies. Thus equipped we might achieve the unprecedented, speed, scale and complexity of change we need to meet the immense challenges of the twenty-first century. In this BWB Text acclaimed business journalist Rod Oram travels to Beijing, London and Chicago to meet some of these pioneers and report on their setbacks and progress. Because if 10 billion people are going to live well on this planet in 2050, we're going to have to fundamentally change the way we do things.

Providing a clear explanation of the relevant medical science behind the individual medical specialties, Basic Science for Core Medical Training and the MRCP, is an indispensable part of a candidate's MRCP preparation. Directly linked to the Royal College exam, the book follows the same system-based approach as the syllabus for accurate and effective revision. With full coverage of basic science for the medical specialties, the book features material on genetics, cellular, molecular and membrane biology, and biochemistry. Content is presented in an illustrated and easy-to-read format, ensuring that the basic science for each medical specialty is more approachable and accessible. A focus on how the basic sciences aid understanding of clinical practice is reinforced through key tables of differential diagnoses and pharmacology. Ten multiple choice questions at the end of each chapter consolidate learning and enable candidates to test their knowledge. The book also covers common examination errors and areas of misunderstanding to aid learning and help candidates avoid common pitfalls.
