Casting Defects : Types , Causes and Remedies - mech4study

A casting defect is an undesired irregularity in a metal casting process. Some defects can be tolerated while others can be repaired, otherwise they must be eliminated. They are broken down into five main categories: gas porosity, shrinkage defects, mould material defects, pouring metal defects, and metallurgical defects.

Die Casting Defects Analysis. This subject teaches how all Die Casting Defects can be classified into a small number of fundamental causes. From this understanding, the way to eliminate the defect will become much clearer to both individuals and the business as a whole.

Causes of Casting Defects with Remedies Rahul T Patil University of Pune, Ganeshkhind, Pune, Maharashtra 411007 Veena S Metri University of Pune, Ganeshkhind, Pune, Maharashtra 411007 Shubhangi S Tambore University of Pune, Ganeshkhind, Pune, Maharashtra 411007 Abstract— Die casting is an efficient, economical process,

The casting surface shows either a step or shallow indentation along the path of incipient mold failure, often with a short metal in presenting the original crack. This surface fissure or line defect is known as rattails and it appears as an irregular line across the surface of a castings.
