THE SUNDAY TIMES BESTSELLER _____ No sleep for twenty hours. No food for ten. And a ward full of soon-to-be mothers... Midwives are there for us at some of the most challenging, empowering and defining moments of our lives. From heart-wrenching grief to the pure joy of a new-born baby, midwife Leah Hazard has seen it all. But life on the NHS front line, working

within a system at breaking point, is more extreme than you could ever imagine. Moving and compassionate, funny and unexpected, Leah shares her experiences in this extraordinary love letter to new mothers and fellow midwives everywhere.

_____ 'The stories in Hard Pushed highlight the bravery of our midwives, and the women they care for.' CHRISTIE WATSON, author of The Language of Kindness 'Heart-rending, inspiring and funny, Hard Pushed brings alive the world of midwifery in all its complexity and radiates love and respect for women.' PROFESSOR LESLEY PAGE CBE, former president of the Royal College of Midwives 'It is Leah Hazard's capacity to love and give so personally to the many thousands of women she has worked with which imbues this book with its power.' JULIA SAMUEL, author of Grief Works 'Not only powerful but well written too . . . a worthwhile addition to a genre fast becoming as crowded as a busy maternity unit.' DAILY EXPRESS 'A riveting read- heartwarming and heartbreaking' SHEENA BYROM OBE, midwifery consultant and author of Catching Babies 'A beautifully written, intimate portrait of the extraordinary work that midwives carry out each and every day.' CAROLINE ELTON, author of Also Human- The Inner Lives of Doctors

Sexually transmitted diseases, unintended pregnancies, infertility, and other reproductive problems are a growing concern around the world, especially in developing countries. Reproductive Health in Developing Countries describes the magnitude of these problems and what is known about the effectiveness of interventions in the following areas: Infection-free sex. Immediate priorities for combating sexually transmitted and reproductive tract diseases are identified. Intended pregnancies and births. The panel reports on the state of family planning and ways to provide services. Healthy pregnancy and delivery. The book explores the

myths and substantive socio-economic problems that underlie maternal deaths. Healthy sexuality. Such issues as sexual violence and the practice of female genital mutilation are discussed in terms of the cultural contexts in which they occur. Addressing the design and delivery of reproductive health services, this volume presents lessons learned from past programs and offers principles for deciding how to spend limited available funds. Reproductive Health in Developing Countries will be of special interest to policy-makers, health care professionals, and researchers working on reproductive issues in the developing world.

The emphasis of the manual is on rapid assessment and decision making. The clinical action steps are based on clinical assessment with limited reliance on laboratory or other tests and most are possible in a variety of clinical settings.

The #1 maternity book in the market is getting even better. Maternity and Women's Health Care, 11th Edition provides evidence-based coverage of everything you need to know about caring for women of childbearing age. Not only does this text emphasize childbearing concerns like newborn care, it also addresses wellness promotion and management of women's health problems. In describing the continuum of care, it integrates the importance of understanding family, culture, and community-based care. Boasting new medication alerts and updated content throughout, this edition covers the new maternal levels of care, and the revised AAP policy on breastfeeding and infant sleep. Expert authors of the market-leading maternity nursing textbook deliver the most accurate, up-to-date content. Clinical reasoning case studies provide you with opportunities to test and develop your analytical skills and to apply knowledge in various settings. Community Activity boxes focus on maternal and newborn activities that can be pursued in local community settings

and illustrate nursing care in a variety of settings. Cultural Considerations stress the importance of considering the beliefs and health practices of patients from various cultures when providing care. Emergency boxes provide information about various emergency situations and offer a quick reference in critical situations. Family-Centered Care boxes highlight the needs and concerns of families that you should consider to provide family-centered care. Medication guides provide an important reference of drugs and their interactions. Nursing care plans include rationales for interventions and provide you with an overview of, and specific guidelines for, delivering effective nursing care. Safety alerts highlighted and integrated within the content draw attention to developing competencies related to safe nursing practice. Signs of potential complications highlight vital concerns, alerting you to signs and symptoms of complications and the immediate interventions to provide. Teaching for Self-Management boxes highlight important information that nurses need to communicate to patients and families for follow-up care.

Accompanying CD-ROM contains ... "case studies, clinical thinking questions, videos, animations, a care plan constructor, illustrated skills, English-Spanish translations, and an audio glossary."--P. [4] of cover.

The current edition is a revised edition of the 19th edition which was launched especially for Indian Nursing students. Thoroughly revised and presented in full color, the current edition would serve as a textbook in Maternity nursing to the students of B. Sc Nursing, post-basic B.Sc. Nursing and Diploma in nursing. This book is equally useful to the students of M.Sc Nursing and to those who are preparing to go abroad to work as nurse practitioners.

Suitable for students and practitioners in the clinical setting, this book provides at-a-glance coverage of antepartum, intrapartum, and postpartum care of women and infants, as well as childbearing complications and women's health. It also includes step-by-step descriptions of common procedures in maternal-newborn nursing.

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American

women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Canadian Maternity and Pediatric Nursing prepares your students for safe and effective maternity and pediatric nursing practice. The content provides the student with essential information to care for women and their families, to assist them to make the right choices safely, intelligently, and with confidence.

The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (D-CP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

This new book will be a core text for undergraduate Maternity/Newborn courses. It also will work for courses emphasizing Women's Health across the lifespan. Coverage includes core content on preconception, pregnancy, labor, birth, and postpartum. In addition, the text focuses on important topics throughout a woman's life: health promotion, nutrition, medical issues, psychosocial is-

ues, sexuality, family, fertility control and issues, menopause, and aging. While other texts touch on the different stages of a woman's lifespan, this book provides more detail and information in areas outside the average maternity text.

Within the continuum of reproductive health care, antenatal care provides a platform for important health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues surrounding healthcare practices and delivery, and prioritizes person-centered health and well-being --- not only the prevention of death and morbidity --- in accordance with a human rights-based approach.

What does it mean to be a successful working parent? And how do working parents cope in the United States, the only developed nation with no paid parental leave requirement? Despite some positive advancement in the voluntary adoption of paid parental leave, many organizations over the past 25 years have instead decreased paid leave benefits offered to employees in the United States, choosing instead to let unpaid leave under the Family Medical Leave Act (FMLA) serve in its place. This regression in practice is perhaps the greatest unintended consequence of FMLA and surely was not the intent of Congress. Maternity Leave: Policy and Practice, Second Edition approaches parental leave from a variety of perspectives: legal, political, social, institutional, organizational, and, most importantly, from the personal perspectives of the

women and men interviewed expressly for the book. This second edition offers two new chapters: the first puts the issue of maternity leave within the context of work-life balance issues, and the second explores case studies from states, cities, and private organizations. Incorporating new census data, related reports, and academic studies, authors Victoria Gordon and Beth M. Rauhaus utilize relevant and cutting-edge research in their exploration of parental leave, and they enrich this research with the individual stories of ordinary working parents as well as those who choose not to have children. Assuming no prior specialized knowledge, this book can be assigned on a variety of undergraduate and graduate courses in politics, public policy, public administration, gender studies, and human resource management, and will equally be of interest to parents, policy makers, and C-suite managers.

World Bank Technical Paper No. 404. The health of Russian women has suffered during the economic crisis of recent years. Morbid-

ity and mortality from chronic and infectious diseases have increased. Women's reproductive health has been compromised by an increase in the incidence of sexually transmitted diseases and by lack of access to up-to-date, high quality maternity and family planning services. This paper summarizes this current situation and reports on the findings of one element of the World Bank's assistance to improve health care in the Russian Federation: a field testing of revised protocols for the care of women and infants.

Humanity, argues Michel Odent, stands at a crossroads in the history of childbirth--and the direction we choose to take will have critical consequences. Until recently a woman could not have had a baby without releasing a complex cocktail of "love hormones." In many societies today, most women give birth without relying on the release of such a flow of hormones. Some give birth via cesarean section, while others use drugs that not only block the release of these natural substances, but also do not have their beneficial behavioral effects. "This unprecedented situation must be considered in terms of civilization," says Odent. It gives us urgent new reasons to rediscover the basic needs of women in labor. At a time when pleas for the "humanization" of childbirth are fashionable, the author suggests, rather, that we should first accept our 'mammalian' condition and give priority to the woman's need for privacy and to feel secure. The activity of the intellect, the use of language, and many cultural beliefs and rituals--which are all special to humans--are handicaps in the period surrounding birth. Says Odent: "To give birth to her baby, the mother needs privacy. She needs to feel unobserved. The newborn baby needs the skin of the mother, the smell of the mother, her breast. These are all needs that we hold in common with the other mammals, but which humans have learned to neglect, to ignore or even deny." Expectant parents, midwives, childbirth educators, those involved in public health, and all those interested in the future of humanity will find this a provocative and visionary book. Contents: Our Mammalian Roots (and a little girl in North Dakota) At the Dawn of the Post-Electronic Age (side effects of electronic fetal monitoring) The Hospital of the Future (privacy in the birthplace) On Another Planet (the human environment in the birthplace) The Fetus Ejection Reflex (regarding the birth of non-human mammals) Cats (a diversion) The Old and the New (the main chapter) Colostrum and Civilization (the newborn and contact with the mother) From Holland to Malawi (a Dutch midwife and a tradi-

tional birth attendant) Photos and Videos (the invasive camera) Freud as a Midwife (low-profile midwives as the experts on psychology) The Hormone of Love (the hormonal basis of "love") Breastfeeding and Family Structures (two inseparable topics) Lullaby Time (the specifically human lullaby)

"Publisher's Note: Maternity, Newborn, and Women's Health is a comprehensive textbook for nursing students. The text is case-based with fictional characters drawn from experience playing both continuous and recurring roles. Case-based learning provides students with an explanatory context, helping them to retain information, encouraging them to think critically, and allowing them to apply what they are learning to clinical practice. The first unit, Scenarios for Clinical Preparation, is devoted to preconception-to-postpartum care of individuals with common pregnancy-related pathologies and sequelae. These chapters provide comprehensive scenarios for the entirety of these pregnancies, integrating normal progressions as well as common associated complications. The purpose of this unit is to provide early frontloading of content to prepare students for clinical. All chapters in the second unit, Kellie Bettencourt: The Uncomplicated Patient, pertain to one case. The remaining two units--Unit III: High-Risk Conditions and Complications, and Unit IV, Women's Health--provide comprehensive, traditionally organized content that integrates the patients of the first and second unit as recurrent characters in order to reinforce earlier study. When students read Unit III, the recurrent character from Unit I and Unit 2 will provide familiar content and aid in comprehension. As with clinical, it is the participation in many similar situations that facilitates learning, not just a single exposure to a patient. The book will take care to value context when making the new presentation of older information in order for it to be reinforcing and stimulating instead of just repetitive. With a goal of approaching the information in multiple ways, many innovative features are included to introduce a different perspective on the topic. For example, "Pop Quiz" analyzes commonly occurring plot points seen in popular media for accuracy; "Analyze the Evidence" provides accessible comparisons of contradictory research and practice; and "Step-by-Step Skills" provides the task-based information critical to nursing success and student confidence. All features are designed to be accessible, narratively compelling, conducive to curiosity and critical thinking, and to emphasize in-depth learning"--Provided by publisher.

View is a groundbreaking workbook/CD-ROM package that brings learning to life in a virtual hospital setting. This guided learning experience features textbook reading assignments that correspond with the CD-ROM and workbook activities. The workbook acts as a map, guiding students through the CD-ROM as they care for patients in the virtual hospital to help students make connections between what they experience through the CD-ROM and what they've learned in their textbook. Each virtual hospital visit allows the student to access realistic information resources essential to patient care resulting in a true-to-life, hands-on learning experience. Users will also discover that this edition of VCE is easier to use with the inclusion of flash-based technology and the elimination of previously needed third-party plug-ins. Meaningful, real-world problems place users in nursing scenarios where they can set priorities for care, collect data, analyze and interpret data, and reach conclusions about complex problems within a health-illness transition. The highly-engaging format encourages active learning and provides opportunities to identify information to collect and process data for evidence-based patient care; work with data entry and retrieval screens; optimize use of available information resources; understand hospital information systems; manage information for decision-making; and maintain and improve core computing skills. Lessons in the workbook complement the content in the textbook and guide the student through the virtual hospital. Includes NCLEX examination-style questions that offer built-in testing of clinical knowledge. The CD-ROM offers users the opportunity to visit each patient and access realistic information essential for patient care, including: charts, medical administration records, electronic patient records, video clips of nurse-client interactions, and other related materials. A clock icon appears under each lesson, estimating how much time it will take to complete. A linkage icon alerts the user whenever they are about to begin an exercise that connects with previous lessons. The elimination of third-party plug-ins facilitates fast and easy software installation. Flash-based technology allows for more ease of use and seamless navigation. Greater faculty support with the addition of the FAC PAC, a new instructors website, and a radically expanded testing component. A medication administration feature enables users to select, prepare, and administer medications. Over 50 common medication errors imbedded within the software to boost clinical realism and prepare students for current practice. A Medi-

cation Room that contains a wide variety of drug storage areas, such as a Unit Dosage Cabinet, Automated Dispensing System, IV Storage, and a Refrigerator. 6 unique patients/cases, each with complex medical-surgical conditions for students to care for and monitor within the virtual hospital.

Plus, obstetricians, midwives and parents advise on your baby's development, medical matters, your changing body, diet, fitness and much more. A special hour-by-hour rundown of what to expect during and immediately after birth, plus further reassurance for the first two weeks of your baby's life, will give a helping hand through the culmination of your pregnancy, from pain relief to those first intimate and unique moments between you and your child.

This up-to-date comprehensive and consolidated guideline on essential intrapartum care brings together new and existing WHO recommendations that when delivered as a package will ensure good-quality and evidence-based care irrespective of the setting or level of health care. The recommendations presented in this guideline are neither country nor region specific and acknowledge the variations that exist globally as to the level of available health services within and between countries. The guideline highlights the importance of woman-centred care to optimize the experience of labour and childbirth for women and their babies through a holistic human rights-based approach. It introduces a global model of intrapartum care which takes into account the complexity and diverse nature of prevailing models of care and contemporary practice. The recommendations in this guideline are intended to inform the development of relevant national- and local-level health policies and clinical protocols. Therefore the target audience includes national and local public health policy-makers implementers and managers of maternal and child health programmes health care facility managers nongovernmental organizations (NGOs) professional societies involved in the planning and management of maternal and child health services health care professionals (including nurses midwives general medical practitioners and

obstetricians) and academic staff involved in training health care professionals.

This book provides a comprehensive, fully referenced and readable review of the latest scientific evidence linking women's experiences in childhood and young adult life to their health and disease risk in midlife and beyond. It emphasises the interactive nature of biological, psychological and social risks to health and focuses on the key risks to health for women in developing as well as developed countries. Commentaries on each chapter are given by international experts.

The role of the community midwife differs dramatically from that of a hospital based practitioner but many midwives entering this area of practice may not feel well equipped for this diverse experience. Community Midwifery Practice is the first text specifically tailored to meet the needs of community midwives, providing a

practical, skills-based guide to improving and underpinning their day-to-day practice with an emphasis on 'normal' birth and the importance of developing relationships with the women they are charged with helping. This accessible text includes information on the broad range of skills required by midwives working in community settings, providing practical guidance on issues such as supporting women with HIV/AIDS, issues surrounding domestic abuse, perinatal mental health, and pelvic girdle pain. Community Midwifery Practice will provide all midwives who work in community placements with a comprehensive, accessible tool designed to assist them in all aspects of their practice.

The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. *Counselling for Maternal and Newborn Health Care* is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labor; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have under-

stood the key points before they progress to subsequent sessions. People are fascinated by stories of childbirth, and the sources to document maternity in Britain in the twentieth century are rich and varied. This book puts the history of maternity in England into its wider social context, highlighting areas of change and continuity, and charting the development of pregnancy and birth as it emerged from the shadows and became central to social debate. *A Social History of Maternity and Childbirth* considers the significance of the regulation and training of midwives and doctors, exploring important aspects of maternity care including efforts to tackle maternal deaths, the move of birth from home to hospital, and the rise of consumer groups. Using oral histories and women's memoirs, as well as local health records and contemporary reports and papers, this book explores the experiences of women and families, and includes the voices of women, midwives and doctors. Key themes are discussed throughout, including: the work and status of the midwife the place of birth pain relief ante- and post- natal care women's pressure groups high-tech versus low-tech political pressures. At a time when the midwifery profession, and the wider structure of maternity care, is a matter for popular and political debate, this book is a timely contribution. It will be an invaluable read for all those interested in maternity care in England.
