The pace of change in academia is ever increasing, which makes it difficult for anyone to stay up to date with what may be the right long-term strategy, or even the next step in mastering a PhD or to secure a fruitful academic career. Academic mentoring has proved to be helpful to many young researchers in difficult situations and mentoring programmes have been launched at many universities. In its most basic meaning, mentoring is a goal-oriented off-line conversation between a more experienced (mentor) and a less experienced (mentee) person with the objective to empower the mentee to make important work-related decisions. The first chapter of the book offers an introduction to academic mentoring and provides an overview of what academic mentoring entails. In the following chapters, important topics are discussed that may come up in mentoring conversations. These include scientific thinking, doctoral studies, behaviour and disappointments, scientific storytelling, teaching, scientific presentations, early career years, research cooperation, job applications and basic data management. The discussions in each of these chapters were designed with a view to provide food for thought and to invite self-reflection as well as continued discussions with peers and mentors. The book is written in a highly accessible style whilst restricting each chapter to the most essential information so that reading them can be accommodated in any busy schedule. It is not limited to any particular university or geographic region, since the author has worked in a number of different countries and encountered many different academic cultures. The text is also a useful handbook and reference to go with mentoring programmes.

Child development laboratory schools are found on college and university campuses throughout the U.S. Over the last century, they have acquired a long, rich history. Originally seen as settings for the new field of child study in the early 1900s, their functions have evolved over time. These programs often play a central role in supporting teaching, research, and outreach/engagement activities in the fields of child development and early childhood education. Yet, many have had to fight for their existence when economic times have gotten difficult. Many long-running programs have had to close. This book provides a unique perspective on the purpose and function of child development laboratory schools and the potential of large-scale research to examine important world problems. The individual stories presented are real stories that offer reasonable solutions and ideas for maximizing the value of these venerable institutions. Most importantly, the authors demonstrate how child development laboratory schools can address the criticisms often lodged regarding their lack of relevancy and focus on real-life problems and solutions. The range of perspectives includes university faculty trying to maximize research that is applied in nature as well as redefining what and where a laboratory is, both in the university and in the community. The message is clear that child development laboratory schools are alive and well, and continuing to evolve.

Our love affair with the digital interface is out of control. We've embraced it in the boardroom, the bedroom, and the bathroom. Screens have taken over our lives. Most people spend over eight hours a day staring at a screen, and some "technological innovators" are hoping to grab even more of your eyeball time. You have screens in your pocket, in your car, on your appliances, and maybe even on your face. Average smartphone users check their phones 150 times a day, responding to the addictive buzz of Facebook or emails or Twitter. Are you sick? There's an app for that! Need to pray? There's an app for that! Dead? Well, there's an app for that, too! And most apps are intentionally addictive distractions that end up taking our attention away from things like family, friends, sleep, and oncoming traffic. There's a better way. In this book, innovator Golden Krishna challenges our world of nagging, screen-based bondage, and shows how we can build a technologically advanced world without digital interfaces. In his insightful, raw, and often hilarious criticism, Golden reveals fascinating ways to think beyond screens using three principles that lead to more meaningful innovation. Whether you're working in technology, or just wary of a gadget-filled future, you'll be enlightened and entertained while discovering that the best interface is no interface.

The performance of the International Food Policy Research Institute’s (IFPRI’s) research program that focuses on water resource issues is reviewed for the period 1994–2010 around the three themes that constitute the program: global modeling, river basin modeling, and institutions. The IFPRI water team has been involved in leading-edge research in a number of dimensions: it has focused on analysis at varying geographic scales; the work has been truly interdisciplinary by engaging economics with biophysical science and other social sciences; and research outputs have been innovative in advancing institutional analysis and water pricing and in policy measures addressing the complexities of water supply management. In the research tasks, IFPRI’s water team actively collaborated with a wide range of researchers from within the CGIAR network, national research institutes, and universities. Within the team, a largely stable group of leaders has been responsible for the professional development of a substantial cohort of junior staff who have moved onto successful careers elsewhere. The output of the program has been prolific and prominent in academic, policy, and development communities. The approach taken is to review selected publications from the themes; assess the quality of the journals in which papers have been published; and evaluate the performance, on average, of researchers in the program. In addition, surveys of stakeholders were carried out, and three specific projects were subjected to detailed review. The assessment

demonstrated the high regard in which the program research outputs and researchers are held. The IFPRI water team has been remarkably productive throughout the 16 years considered, working on issues that are of high relevance to policy and producing work that has largely been cutting edge. However, impacts generated by individual projects were not consistently or readily identifiable. To maximize the benefits of this performance and to overcome challenges associated with securing more outcomes, this report recommends that a more coordinated approach be taken to develop the research project portfolio. This would involve better targeting of projects to policy objectives through a more systematic review of research demand forces and improved integration of research work with policy development processes. The latter in particular requires the development of a sense of research project “ownership” within the policy circles the research is designed to influence. More effort in the development of in-country research partnerships can aid this process as local researchers can act as “champions” within local policy circles. Where government agencies have a research function, their integration into the partnerships is recommended. Avoidance of completing research projects in a “policy vacuum” is critical but requires both advanced planning of each research project as well as constant adaptation of the work plan to (often rapidly) evolving policy contexts. To achieve project impacts beyond the immediacy of the specific case study context, a more targeted and coordinated publication strategy should be developed in light of changing publication technology. Project webpages within the IFPRI website, with readily downloadable reports, are useful during the implementation of each project and more formal papers should be targeted for publication in high-impact factor technical journals with parallel papers prepared for more policy-oriented journals that have high circulations.

Building a successful product usually involves teams of people, and many choose the Scrum approach to aid in creating products that deliver the highest possible value. Implementing Scrum gives teams a collection of powerful ideas they can assemble to fit their needs and meet their goals. The ninety-four patterns contained within are elaborated nuggets of insight into Scrum’s building blocks, how they work, and how to use them. They offer novices a roadmap for starting from scratch, yet they help intermediate practitioners fine-tune or fortify their Scrum implementations. Experienced practitioners can use the patterns and supporting expla-

nations to get a better understanding of how the parts of Scrum complement each other to solve common problems in product development. The patterns are written in the well-known Alexandrian form, whose roots in architecture and design have enjoyed broad application in the software world. The form organizes each pattern so you can navigate directly to organizational design tradeoffs or jump to the solution or rationale that makes the solution work. The patterns flow together naturally through the context sections at their beginning and end. Learn everything you need to know to master and implement Scrum one step at a time—the agile way.

Government agencies tasked with managing environmental site cleanup strive to increase competition and decrease their environmental liabilities. Many utilize contracts that shift cost overrun risk to contractors. Cost-conscious contractors are transitioning more responsibility to project managers, with less budget and fewer staff to execute project support functions previously provided by company resource organizations. Now many project managers feel like they’re managing their own small business—completely in charge of their destiny. This has led to the ruin of many projects and even the demise of a few proud companies. Best Practices for Environmental Project Teams provides project managers and their teams, Government managers, and regulatory agencies with action-oriented guidelines for executing 9 essential business competencies. Understand your Government Client Business Model Implement a Flexible Environmental Quality Management System Develop and Utilize User-Friendly Project Websites Develop Superior Proposals Develop Superior Project Work Plans Implement More Rigorous Scope Management Tools Effectively Control Field Work Utilize Cause Analysis to Generate Solutions Design User-Friendly Work Processes for Project Teams
