Fifty years have passed since the first Earth Day, on 22 April 1970. This accessible, incisive and timely collection of essays brings together a diverse set of expert voices to examine how the Earth's environment has changed over this past half century, and what lies in store for our planet over the coming fifty years. *Earth 2020: An Insider's Guide to a Rapidly Changing Planet* responds to a public increasingly concerned about the deterioration of Earth's natural systems, offering readers a wealth of perspectives on our shared ecological past, and on the future trajectory of planet Earth. Written by world-leading thinkers on the front-lines of global change research and policy, this multi-disciplinary collection maintains a dual focus: some essays investigate specific facets of the physical Earth system, while others explore the social, legal and political dimensions shaping the human environmental footprint. In doing so, the essays collectively highlight the urgent need for collaboration across diverse domains of expertise in addressing one of the most significant challenges facing us today. *Earth 2020* is essential reading for everyone seeking a deeper understanding of the past, present and future of our planet, and the role of humanity in shaping this trajectory.

An authoritative analysis of [a decade of] research on institutional architectures in earth system governance, covering key elements, structures and policy options.

Studies in nucleosynthesis and nuclear astrophysics are highly interdisciplinary, encompassing such fields as nuclear physics, stellar structure and evolution, hydrostatics and hydrodynamics, differential equations for following isotopic abundance changes in stellar plasmas and in the interstellar medium, and astronomical observations. *Essentials of Nucleosynthesis and Theoretical Nuclear Astrophysics* brings together the theoretical aspects of these top-

ics in a single volume, providing the necessary mathematical tools and equations with unified notation to enable studying nucleosynthesis in a variety of astrophysical sites. How are curriculum policies translated into opportunities to learn in the classroom? According to the Book presents findings from the largest cross-national study of textbooks carried out to date - the curriculum analysis of the 1995 Third International Mathematics and Science Study (TIMSS). This study included a detailed, page-by-

page, inventory of the mathematics and science content, pedagogy, and other characteristics collected from hundreds of textbooks in over forty countries. Drawing on these data, the authors investigate the rhetorical and pedagogical features of textbooks to understand how they promote and constrain educational opportunities. They investigate how textbooks are constructed and how they structure diverse elements into prescriptions for teaching practice. The authors break new ground in understanding textbooks in terms of different educational opportunities that they make possible. The book examines policy implications from these new understandings. In particular, conclusions are offered regarding the role of textbooks in curriculum-driven educational reform, in light of their role as promoters of qualitatively distinct educational opportunities.

American environmental literature has relied heavily on the perspectives of European Americans, often ignoring other groups. In *Black on Earth*, Kimberly Ruffin expands the reach of ecocriticism by analyzing the ecological experiences, conceptions, and desires seen in African American writing. Ruffin identifies a theory of "ecological burden and beauty" in which African American authors underscore the ecological burdens of living within human hierarchies in the social order just as they explore the ecological beauty of being a part of the natural order. Blacks were ecological agents before the emergence of American nature writing, argues Ruffin, and their perspectives are critical to understanding the full scope of ecological thought. Ruffin examines African American ecological insights from the antebellum era to the twenty-first century, considering WPA slave narratives, neo-slave poetry, novels, essays, and documentary films, by such artists as Octavia Butler, Alice Walker, Henry Dumas, Percival Everett, Spike Lee, and Jayne Cortez. Identifying themes

of work, slavery, religion, mythology, music, and citizenship, Black on Earth highlights the ways in which African American writers are visionary ecological artists.

In this timely and moving collection of poems, Sarah P. Strong explores what it means to live in a world undergoing an irrevocable transformation, the magnitude of which we barely comprehend. A broad range of perspectives shows us different times and places on Earth while unfolding the cyclical nature of human denial and response. A series of linked persona poems about the Dust Bowl recounts the destruction of the Great Plains and how human dreams of plenty destroyed the ancient fertility and stability of the land, how heartbreak and denial contended with bureaucratic insolence. In an imagined view of our planet as it might appear millennia from now, the Earth is "a worry stone / in the pocket of space, or a mood ring / on the finger of a newly minted / god." The Mouth of Earth serves as both a survival guide for those seeking connection with our planet and one another as well as a compassionate tribute to what we have lost or are losing—the human consequences of such destruction in a time of climate crisis and lost connectivity. Strong's powerful poems offer us, if not consolation, at least a way toward comprehension in an age of loss, revealing both our ongoing denial of our planet's fragility and the compelling urgency of our hunger for connection with all life.

Living Earth Community: Multiple Ways of Being and Knowing is a celebration of the diversity of ways in which humans can relate to the world around them, and an invitation to its readers to partake in planetary coexistence. Innovative, informative, and highly accessible, this interdisciplinary anthology of essays brings together scholars, writers and educators across the sciences and humanities, in a collaborative effort to illuminate the different ways of being in the world and the different kinds of knowledge they entail – from the ecological knowledge of Indigenous communities, to the scientific knowledge of a biologist and the embodied knowledge communicated through storytelling. This anthology examines the interplay between Nature and Culture in the setting of our current age of ecological crisis, stressing the importance of addressing these ecological crises occurring around the planet through multiple perspectives. These perspectives are exemplified through diverse case studies – from the political and ethical implications of thinking with forests, to the capacity of storytelling to motivate action, to the worldview of the Indigenous Okanagan community in British Columbia. Living Earth Community: Multiple Ways of Being and Knowing synthesizes insights from across a range of academic fields, and highlights the potential for synergy between disciplinary approaches and inquiries. This anthology is essential reading not only for researchers and students, but for anyone interested in the ways in which humans interact with the community of life on Earth, especially during this current period of environmental emergency.

DEEP LEARNING FOR THE EARTH SCIENCES Explore this insightful treatment of deep learning in the field of earth sciences, from four leading voices Deep learning is a fundamental technique in modern Artificial Intelligence and is being applied to disciplines across the scientific spectrum; earth science is no exception. Yet, the link between deep learning and Earth sciences has only recently entered academic curricula and thus has not yet proliferated. Deep Learning for the Earth Sciences delivers a unique perspective and treatment of the concepts, skills, and practices necessary to quickly become familiar with the application of deep learning techniques to the Earth sciences. The book pre-

compares readers to be ready to use the technologies and principles described in their own research. The distinguished editors have also included resources that explain and provide new ideas and recommendations for new research especially useful to those involved in advanced research education or those seeking PhD thesis orientations. Readers will also benefit from the inclusion of: An introduction to deep learning for classification purposes, including advances in image segmentation and encoding priors, anomaly detection and target detection, and domain adaptation An exploration of learning representations and unsupervised deep learning, including deep learning image fusion, image retrieval, and matching and co-registration Practical discussions of regression, fitting, parameter retrieval, forecasting and interpolation An examination of physics-aware deep learning models, including emulation of complex codes and model parametrizations Perfect for PhD students and researchers in the fields of geosciences, image processing, remote sensing, electrical engineering and computer science, and machine learning, Deep Learning for the Earth Sciences will also earn a place in the libraries of machine learning and pattern recognition researchers, engineers, and scientists.

Environmentally, our planet lacks the laws to keep it safe and those laws we do have are feebly enforced. Every new year is the hottest in human history, while forest, reef, ice, tundra, and species are disappearing forever. It is easy to lose all hope. Who will stop the planet from committing ecological suicide? The UN? Governments? Activists? Corporations? Engineers? Scientists? Whoever, environmental laws need to be enforceable and enforced. Step forward a fresh breed of passionately purposeful environmental lawyers. They provide new rules to legislatures, see that they are enforced, and keep us informed. They tackle big business to ensure money flows into cultural change, because money is the grammar of business just as science is the grammar of nature. At the head of this new legal army stands James Thornton, who takes governments to court, and wins. And his client is the Earth. With Client Earth, we travel from Poland to Ghana, from Alaska to China, to see how citizens can use public interest law to protect their planet. Foundations and philanthropists support the law group ClientEarth because they see, plainly and brightly, that the law is a force all parties recognize. Lawyers who take the Earth as their client are exceptional and inspirational. They give us back our hope. PRAISE FOR JAMES THORNTON AND MARTIN GOODMAN

As climate change and development pressures overwhelm the environment, our emotional relationships with Earth are also in crisis. Pessimism and distress are overwhelming people the world over. In this maelstrom of emotion, solastalgia, the homesickness you have when you are still at home, has become, writes Glenn A. Albrecht, one of the defining emotions of the twenty-first century. Earth Emotions examines our positive and negative Earth emotions. It explains the author's concept of solastalgia and other well-known eco-emotions such as biophilia and topophilia. Albrecht introduces us to the many new words needed to describe the full range of our emotional responses to the emergent state of the world. We need this creation of a hopeful vocabulary of positive emotions, argues Albrecht, so that we can extract ourselves out of environmental desolation and reignite our millennia-old biophilia—love of life—for our home planet. To do so, he proposes a dramatic change from the current human-dominated Anthropocene era to one that will be founded, materially, ethically, politically, and spiritually on the revolution in thinking being delivered by contemporary symbiotic science. Albrecht names this period the Symbiocene. With the current and coming generations, "Generation Symbiocene," Albrecht sees reason for optimism. The battle between the forces of destruction and

the forces of creation will be won by Generation Symbiocene, and Earth Emotions presents an ethical and emotional odyssey for that victory.

By 1979, we knew all that we know now about the science of climate change - what was happening, why it was happening, and how to stop it. Over the next ten years, we had the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich's groundbreaking account of that failure - and how tantalizingly close we came to signing binding treaties that would have saved us all before the fossil fuels industry and politicians committed to anti-scientific denialism - is already a journalistic blockbuster, a full issue of the New York Times Magazine that has earned favorable comparisons to Rachel Carson's Silent Spring and John Hersey's Hiroshima. Rich has become an instant, in-demand expert and speaker. A major movie deal is already in place. It is the story, perhaps, that can shift the conversation. In the book Losing Earth, Rich is able to provide more of the context for what did - and didn't - happen in the 1980s and, more important, is able to carry the story fully into the present day and wrestle with what those past failures mean for us in 2019. It is not just an agonizing revelation of historical missed opportunities, but a clear-eyed and eloquent assessment of how we got to now, and what we can and must do before it's truly too late.

Owing to their unique magnetic, phosphorescent, and catalytic properties, rare earths are the elements that make possible everything from the miniaturization of electronics, to the enabling of green energy and medical technologies, to supporting essential telecommunications and defense systems. An iPhone uses eight rare earths for everything from its colored screen, to its speakers, to the miniaturization of the phone's circuitry. On the periodic table rare earth elements comprise a set of seventeen chemical elements (the fifteen lanthanides plus scandium and yttrium). There would be no Pokémon Go without rare earths. Rare Earth Frontiers is a work of human geography. Klinger looks historically and geographically at the ways rare earth elements in three discrete but representative and contested sites are given meaning.

Explains the essential tasks for achieving healthy and safe construction sites and helps the reader to identify hazards and control risks. This book also explains how to plan, organise, control, monitor and review health and safety throughout the life of a project. It is suitable for those involved in construction work.

A distinguished psychiatrist from Martinique who took part in the Algerian Nationalist Movement, Frantz Fanon was one of the most important theorists of revolutionary struggle, colonialism, and racial difference in history. Fanon's masterwork is a classic alongside Edward Said's Orientalism or The Autobiography of Malcolm X, and it is now available in a new translation that updates its language for a new generation of readers. The Wretched of the Earth is a brilliant analysis of the psychology of the colonized and their path to liberation. Bearing singular insight into the rage and frustration of colonized peoples, and the role of violence in effecting historical change, the book incisively attacks the twin perils of postindependence colonial politics: the disenfranchisement of the

masses by the elites on the one hand, and intertribal and interfaith animosities on the other. Fanon's analysis, a veritable handbook of social reorganization for leaders of emerging nations, has been reflected all too clearly in the corruption and violence that has plagued present-day Africa. *The Wretched of the Earth* has had a major impact on civil rights, anticolonialism, and black consciousness movements around the world.

The 10th anniversary edition of *A New Earth* with a new preface by Eckhart Tolle. With his bestselling spiritual guide *The Power of Now*, Eckhart Tolle inspired millions of readers to discover the freedom and joy of a life lived "in the now." In *A New Earth*, Tolle expands on these powerful ideas to show how transcending our ego-based state of consciousness is not only essential to personal happiness, but also the key to ending conflict and suffering throughout the world. Tolle describes how our attachment to the ego creates the dysfunction that leads to anger, jealousy, and unhappiness, and shows readers how to awaken to a new state of consciousness and follow the path to a truly fulfilling existence. Illuminating, enlightening, and uplifting, *A New Earth* is a profoundly spiritual

manifesto for a better way of life—and for building a better world.

A scenario for the next half-century (2020 - 2070) that explores climate disruption, a world systems crisis, a great fall for humanity, a time of great sorrow, awakening to our predicament as a human community, and together confronting the choice of rising to a higher level of maturity and potential as a species. While moving toward a pathway of great transition, *Choosing Earth* also acknowledges two other futures that are powerfully present in the world: 1) A pathway of breakdown, chaos and collapse; and 2) a pathway of authoritarian control enhanced with AI that wrenches the world back from the brink of catastrophe with the strict controls. This wide-ranging book looks wide, deep, and long: Looks wide by integrating a wide range and diversity of knowledge sources. Looks deep by including consciousness, awakening experiences, compassion and other invisible factors for understanding. Looks long by raising our gaze to the next half-century and beyond to get our bearings for the changing pathway ahead.
