Issues linking climate change and economic growth are now at the centre of discussions regarding development strategies especially in the context of developing countries. This book contributes by analyzing the relationship between economic growth and GHG emissions in India with explicit reference to all major economic sectors. One of the most popular tools for macroeconomic policy analysis is Social Accounting Matrix (SAM). The book presents the methods and estimates of the latest Social Accounting Matrix (SAM) for India, which provides a major data base describing the complete circular flow of income and input-output transactions among the sectors of the economy. The novelty of the book lies in the fact that for the first time a SAM has been prepared for the Indian economy with environmental indicators. A detailed methodology for constructing such an extended SAM is also presented in the book. The environmental social accounting matrix (ESAM) based analysis has been included to show direct and indirect links between economic growth and GHG emissions. The book also includes analysis of factors affecting historical GHG emissions trends in India. The book goes beyond SAM and applies computable general equilibrium (CGE) modelling to derive climate-change policy analysis and simulations. This CGE-based analysis is an important contribution to the current debate surrounding carbon tax and its possible impact on macroeconomic growth.

The imperative of the twenty-first century is sustainability: to raise the living standards of the world's poor and to achieve and maintain high levels of social health among the affluent nations while simultaneously reducing and reversing the environmental damage wrought by human activity. Current Issues in Maritime Economics contains a selection of the papers presented at an international conference held in Rotterdam, June 1991. The book contains 11 papers from many world leaders in maritime economic analysis and will be of interest to shipping professionals as well as to students of the field. Current Issues in Maritime Economics addresses three major areas of interest. First, contributors discuss the rapidly changing international context. Second, the relationship between market structure and the workability of competition is analyzed. The final area concerns the decision processes of firms in the changing shipping world. Individually these papers might have found their way into volumes on subjects as disparate as business finance, industrial structure, mathematical modelling or political philosophy. Together they offer a broad representation of both the issues and the style of analysis adopted by many of the world's leading maritime economists.

A comprehensive Teacher's Resource to compliment the use of Economics Now: Analyzing Current Issues student text

"This important book deals with the essential principles of resource and environmental economics, provides applications to contemporary issues in this field, and outlines and assesses policies being used or proposed for managing the use of environmental and natural resources. Covering specific contemporary topics such as agriculture and the environment, water use, greenhouse gas management, biodiversity conservation, tourism and the environment, and environmental economics and health, leading issues in resource and environmental economics are outlined and analyzed in an innovative manner. Institutional economics (both new and traditional) is applied and compared with other approaches such as neoclassical economics, behavioral economics and the Austrian School of Economics. This heterogeneous, multi-perspective approach enables problems to be considered from several different angles, thus enhancing the reader's comprehension of the subject matter. Furthermore, using minimal technical jargon, the book takes into account aspects of modern economic analysis such as the costs of and constraints on decision-making and the transaction costs involved in policy implementation."--

This volume offers an objective view of some of the most critical issues in natural resources. Written in nontechnical language, it uses ideas drawn from economics to look at the issues, examine how government laws and policies have caused some of them arise, and to find ways in which problems can be lessened. Origin-

nally published in 1982, this is a valuable resource for students interested in environmental studies and public policy.

This book explores how Islam can impact the structures and performance of firms, financial institutions and capital markets across a range of countries and industries. The Islamic finance industry represents an important reality not only because of the oil wealth of the Gulf states, which have fueled demand for such financial services, but also for an increased demand from a growing Muslim population in the West that aspires to express a full and all-inclusive religious identity. The increased demand for Muslim financial institutions has prompted Western non-Islamic firms to begin providing these services in an interesting effort of acculturation to the new plural scenario. By adopting a multidisciplinary approach, which also takes into account the theological, legal and geopolitical framework, the book offers a comprehensive picture of Islamic financial tools, contracts and business opportunities. Drawing on different fields of expertise, it deals with various themes, such as the theological roots of Islamic economics and finance and its geopolitical impact; the EU policy of cooperation with MENA and GCC countries; the instruments of Islamic finance, its legal principle and ability to become an instrument for enhancing business opportunities; the functioning of Islamic banks; the development of capital markets within a financial model influenced by religious constraints and, finally, the new relationships of this religious financial system with Western legal systems. The book thus provides a complete and extensive overview of the practice of Islamic finance through the lenses offered by studies of economics and management. Providing a careful analysis and an integrated framework of geo-economic and political issues, the book will be a valuable resource for academics, researchers and professionals in International Business, Entrepreneurship and Small Business Management, Law and Religion and Intercultural Studies.

This is the first book to provide readers with a theoretical and empirical analysis of sustainable economic growth in Asian countries. Recently, most Asian countries have achieved rapid economic growth and their existence cannot be ignored in the world economy. However, these countries now face the serious problems that have confronted more developed countries such as environmental problems, social security and unemployment. Rapid economic growth has brought environmental pollution, regional disparities, and serious congestion due to insufficient infrastructure. Thus, it is necessary to understand the background economic mechanism in order to find the prescription for each problem. This book is intended not only for the researcher but also for the policy maker, for both of whom it provides the basic methods for analyzing re-

gional problems from the points of view of endogenous economic growth theory, environmental economics, and spatial economics. This work presents theoretical as well as empirical analyses. Particularly, we cite the examples of Asian countries: Japan, China, Korea, Thailand and others. The aim is for readers to apply the theories in this book to the above-mentioned problems in Asian countries as an aid in policy making. The authors are specialists in macroeconomics, public economics, environmental economics, transportation economics and spatial economics, all of which are important aspects of regional science.

This book provides an overview of current research, analyzing issues raised by transition for which economic theorists and policy makers had no ready answers.
