This book moves away from the frameworks that have traditionally guided ethical decision-making in the Western clinical setting, towards an inclusive, non-coercive and, reflective dialogic approach to moral decision-making. Inspired in part by Jürgen Habermas's discourse theory of morality and principles of communicative action, the book offers a proportionist approach as a way of balancing out the wisdom in traditional frameworks, set in the actual reality of the clinical situation at hand. Putting this approach into practice requires having a conversation, a dialogue or a discourse, with collaboration amongst all the stakeholders. The aim of the dialogue is to reach consensus in the decision, via mutual understanding of the values held by the patient and others whom they see as significant. This book aims to underscore the moral philosophical foundations for having a meaningful conversation. Life and Death Decision in the Clinical Setting is especially relevant in our contemporary era, characterised medically by an ever-increasing armamentarium of life-sustaining technology, but also by increasing multiculturalism, a multiplicity of faiths, and increasing value pluralism.

If ever there was an area requiring that the research-practice gap be bridged, surely it occurs where thanatologists engage with people dealing with human mortality and loss. The field of thanatology—the study of death and dying—is a complex, multidisciplinary area that encompasses the range of human experiences, emotions, expectations, and realities. The Handbook of Thanatology is the most authoritative volume in the field, providing a single source of up-to-date scholarship, research, and practice implications. The handbook is the recommended resource for preparation for the prestigious certificate in thanatology (CT) and fellow in thanatology (FT) credentials, which are administered and granted by ADEC.

This in-depth new volume covers important topics in the field, including: biochemical and technological advances induced by Human Genome Project: proven and newly emerging methods of preparing DNA templates; effects of some widely used lab. reagents on DNA sequencing.

Up to date and easy to read, this textbook provides comprehensive coverage of all major concepts of health promotion and disease prevention. It highlights growth and development throughout the life span, emphasizing normal development as well as the specific problems and health promotion issues common to each stage. To reclaim the public university is to focus our energies on teaching all our students well, educating them for a new, increasingly complicated age. To deliver on this promise, we must interrogate the general education we provide for our students, for that is the vast, unrecognized ground we stand on. It is what students and faculty do most in common. If we can get educating our students right, generally and liberally, then we will have laid a claim to what the public university needs to be.

Are we in control of our own development in adulthood, or are we shaped by circumstances beyond our control? By adopting the concept of intentional self-development (ISD), this text outlines an action-theoretical approach to human development that emphasizes both an individual's ability to shape their own development throughout the lifespan, and the extent to which this potential is limited. By examining general age-related changes and critical life events, Intentional Self-Development and Positive Ageing explores the adaptive cognitive-motivational processes that generate positive development in adulthood, including developmental tasks, cognitive changes, life-stage transitions, and biological and neural processes. Leipold goes on to discuss the concept of positive ageing, highlighting the flexibility of the term and evaluating it from multiple perspectives to demonstrate its subjectivity, as well as its importance. This text also discusses the importance of resilience in positive development, contributing to the search for conditions conducive to positive life conduct across the lifespan. This book will be essential reading for undergraduates and postgraduates studying lifespan development and gerontology, positive psychology, or health psychology, as well as researchers in those fields. It will also be of interest to developmental counselors, clinicians, and other applied occupational groups who are seeking to understand the psychological basis of actions.

Comprehensive, succinct, and applied, HUMAN DEVELOPMENT: A LIFE-SPAN VIEW has proven its ability to capture students' interest while introducing them to the issues, forces, and outcomes that make us who we are. Robert Kail and John Cavanaugh's combined expertise in childhood, adolescence, and gerontology result in a rich description of all life-span stages and important topics. A modified chronological approach traces development from conception through late life, with several chapters dedicated to key topics -- an organization that allows the book to be briefer than other texts. Students gain theoretical and empirical foundations that enable them to become educated, critical interpreters of developmental information. The eighth edition blends basic and applied research with coverage of controversial topics and emergent trends to demonstrate connections between the laboratory and life. A reflection on Federico García Lorca's life, his haunting death, and the fame that reinvigorated the marvelous in the modern world "A galaxy of critical insights into the cultural shock waves circling and crisscrossing Lorca's execution and his unknown resting place, there is not a single book on Lorca like this one."--Andrés Zamora, Vanderbilt University There is something fundamentally unfinished about the life and work of Federico García Lorca (1898-1936), and not simply because his life ended abruptly. Noël Valis reveals how this quality gives shape to the ways in which he has been continuously re-imagined since his death. Lorca's execu-

tion at the start of the Spanish Civil War was not only horrific but transformative, setting in motion many of the poet's afterlives. He is intimately tied to both an individual and a collective identity, as the people's poet, a gay icon, and fabled member of a dead poets' society. The specter of his violent death continues to haunt everything connected to Lorca, fueling the desire to fill in the gaps in the poet's biography.

Inspired by the Rhetoric Culture Project, this volume focuses on the use of imagery, narrative, and cultural schemes to deal with predicaments that arise during the course of life. The contributors explore how people muster their resources to understand and deal with emergencies such as illness, displacement, or genocide. In dealing with such circumstances, people can develop new rhetorical forms and, in the process, establish new cultural resources for succeeding generations. Several of the contributions show how rhetorical cultural forms can themselves create emergencies. The contributors bring expertise from a variety of disciplines, including anthropology and communications studies, underlining the volume's wider relevance as a reflection on the human condition.

"This is History Book. It explored the grand scheme of world history as a product of real-life human beings pursuing their individual and collective interests. It also offered a global perspective on the past by focusing on both the distinctive characteristics of individual societies and the connections that have linked the fortunes of different societies. It has combined a clear chronological framework with the twin themes of traditions and encounters, which help to make the unwieldy story of world history both more manageable and more engaging. From the beginning, Traditions & Encounters offered an inclusive vision of the global past—one that is meaningful and appropriate for the interdependent world of contemporary times!"

For more than twenty-five years, the authors have highlighted the complexities, subtleties, and pervasive influence of persuasive messages. The seventh edition again blends historical, rhetorical, and social psychological approaches to persuasion theory. The engaging discussions and multiple examples introduce the intricacies of social influence and highlight methods of presentation as well as evaluation. The dynamic topic of persuasion presents a constantly changing palette for analysis. The authors dissect theory and practice in multiple contexts—from interpersonal interactions to public communication and persuasive campaigns to advertising to politics. Twitter, YouTube, and social networking sites offer new media for persuasive appeals. The means of persuading one another changes constantly, yet much of what was written by Aristotle continues to be relevant. The production of persuasive messages and the study of message effects have been and will continue to be fertile ground for exploration. Persuasion is an interactive process requiring willing and attentive participants. Becoming responsible, ethical, and credible persuaders involves systematic thinking and informed preparation. The skills required for planning, composing, and delivering effective messages are equally useful for evaluating messages received. The seventh edition provides a thorough, up-to-date discussion of classic and contemporary theories of persuasion to aid readers in developing skills as effective persuaders and as critical consumers of persuasive messages.

Prior to the First World War, more people learned of evolutionary theory from the voluminous writings of Charles Darwin's foremost champion in Germany, Ernst Haeckel (1834–1919), than from any other source, including the writings of Darwin himself. But, with detractors ranging from paleontologist Stephen Jay Gould to modern-day creationists and advocates of intelligent design, Haeckel is better known as a divisive figure than as a pioneering biologist. Robert J. Richards's intellectual biography rehabilitates Haeckel, providing the most accurate measure of his science and art yet written, as well as a moving account of Haeckel's eventful life.
