A Unit injector is a high pressure integrated direct fuel injection system for diesel engines, combining the injector nozzle and the injection pump in a single component. The plunger pump used is usually driven by a shared camshaft. In a unit injector, the device is usually lubricated and cooled by the fuel itself. High pressure injection delivers power and fuel consumption benefits over earlier

lower pressure fuel injection by injecting fuel as a larger number of smaller droplets, giving a much The unit pump injection system (UPS) injects the fuel into the engine cylinder. It consists of an electronically controlled unit pump and a nozzle holder assembly connected via a precisely adapted high-pressure line. The unit injector system (UIS) is a nozzle holder assembly with integrated high-pressure pump.

*Unit injector - Wikipedia*

The requirement for more flexible control of injection parameters gave rise to a new form of unit injector, called the "electronic unit

injector" in which the traditional P-L-N pumping element design has been replaced by a plain plunger and a high speed, electromagnetically (solenoid) operated spill valve.

The Delphi E3 Diesel Electronic Unit Injector (EUI) is one of the world's most advanced production diesel unit injectors for high performance heavy duty applications. It is driven by the engine's overhead camshaft, with one EUI per cylinder. The Delphi E3 EUI helps achieve extremely low smoke/particulate levels at any engine load and speed and, thus, helps reduce the need for large and costly aftertreatment devices.
