Elopomorpha - Nate Chertack

Leptocephalus is the flat and transparent larva of the eel, marine eels, and other members of the Superorder Elopomorpha. This is the most diverse group of teleosts, containing 801 species over the span of 24 orders, 24 families, and 156 genera. It is

supposed that this group arose in the Cretaceous period over 140 million years ago. In yellow European eel, ... a high density and diversity of eel leptocephalus larvae have been collected from the northwestern Coral Sea, ... and anchovetas and the Elopomorpha with eels, bonefish, and some deep-sea forms. Clupeomorphs all share good hearing, due to a curious link between the swim bladder, the ear, and the lateral line.

Freshwater eels and marine eels (conger eel, anago) are commonly used in Japanese cuisine; foods such as unadon and unajū are popular, but expensive. Eels are also very popular in Chinese cuisine, and are prepared in many different ways. Hong Kong eel prices have often reached 1000 HKD (128.86 US Dollars) per kg, and once exceeded 5000 HKD per kg. . The European eel and other freshwater eels ...

A leptocephalus is the flat and transparent larva of the eel, marine eels, and other members of the Superorder Elopomorpha. These fishes with a leptocephalus larva stage include the most familiar eels such as the conger, moray eel, and garden eel, and the freshwater eels of the family Anguillidae, plus more than 10 other families of lesser-known types of marine eels.

Elopomorpha European Eel Leptocephalus Pelican

The superorder Elopomorpha contains a variety of types of fishes that range from typical silvery-colored species, such as the tarpons and ladyfishes of the Elopiformes and the bonefishes of the Albuliformes, to the long and slender, smooth-bodied eels of

the Anguilliformes. The one characteristic un

The marine eels and other members of the Superorder Elopomorpha have a leptocephalus larval stage, which are flat and transparent. This group is quite diverse, containing 801 species in 24 orders, 24 families and 156 genera. They arose in the Cretaceous period 140 million years ago. Fish with a l

Synphobranchidae: Cutthroat Eels. The leptocephalus larvae are unique in that they have telescoping eyes, which jut from the head. One species, *Dysommia rugosa*, has been found in a large colony near a volcano in the American Samoa, and has been aptly nicknamed "Eel City." Another species, *Simenchelys parasitica*, is known to burrow into the flesh of dying fishes and feed upon the blood.
