VHA Dir 1850.02, Pest Management Operations

Integrated Pest Management (IPM) can be defined as: A coordinated system of technological and management practices to control pests in a safe, environmentally sound, and economical manner. It is a process for minimizing pesticide use and risk while maximizing the control of pests that affect public health, impede operations, or damage property.

Mosquito Control in Broomfield If you have a

mosquito complaint/concern, please call the Mosquito Hotline at Vector Disease Control at 303.428.5908. This page describes the integrated pest management approach to mosquito abatement provided to Broomfield by Vector Disease Control International (formerly Colorado Mosquito Control).

Integrated Pest Management (IPM) is "a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools in a way that minimizes economic, health, and environmental risks"

Integrated pest management is a proactive, holis-

tic approach in contrast to the reactive nature of chemical treatment strategies. In fact, over time, pests may become resistant and build-up greater tolerance to chemicals used on them repeatedly.

What is Integrated

Pest Management?

Integrated Pest Management (IPM) is a stepwise approach to pest management that combines accurate knowledge of the pest and level of potential harm with multiple tactics to prevent, reduce or eliminate pests. The emphasis is on using non-chemical means to address pest problems first, with an emphasis on preventing pest conducive conditions.
