The partially treated wastewater is pushed along into the drainfield for further treatment every time new wastewater enters the tank.

~~Are you compliant with the 2020 septic tank regulations ...~~

The EPA has published a Code of Practice: Wastewater Treatment and Disposal Systems Serving Single Houses (p.e < 10). The code of practice (CoP) establishes an overall framework of best prac-

tice in relation to the development of wastewater treatment and disposal systems, in unsewered rural areas, for protection of our environment and specifically water quality.

The average household septic system should be inspected at least every three years by a septic service professional. Household septic tanks are typically pumped every three to five years. Alternative systems with electrical float switches, pumps, or mechanical components should be inspected more often, generally once a year.

The new regs brought in by the Environment Agency will affect both buyers and owners regarding the upkeep of their septic tanks and has been introduced to help stop water pollution due to the harmful effects of discharge waste from septic tanks on the environment. So, from January 1st 2020, if your septic tank was installed and in use after 31st December 2014 and, if your existing septic tank empties into a watercourse - ie ditches, stream or river, you will need to ensure it has a small ...
