What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

As MacArthur award-winning educator Lisa Delpit reminds us—and as all research shows—there is no achievement gap at birth. In her long-awaited second book, Delpit presents a striking picture of the elements of contemporary public education that conspire against the prospects for poor children of color, creating a persistent gap in achievement during the school years that has eluded several decades of reform. Delpit's bestselling and paradigm-shifting first book, *Other People's Children*, focused on cultural slippage in the classroom between white teachers and students of color. Now, in "Multiplication is for White People", Delpit reflects on two decades of reform efforts—including *No Child Left Behind*, standardized testing, the creation of alternative teacher certification paths, and the charter school movement—that have still left a generation of poor children of color feeling that higher educational achievement isn't for them. In chapters covering primary, middle, and high school, as well as college, Delpit concludes that it's not that difficult to explain the persistence of the achievement gap. In her wonderful trademark style, punctuated with telling classroom anecdotes and informed by time spent at dozens of schools across the country, Delpit outlines an inspiring and uplifting blueprint for raising expectations for other people's children, based on the simple premise that multiplication—and every aspect of advanced education—is for everyone.

Many times during the year I hear teachers and parents say how

easy testing is as long as the student applies themselves. After seventeen years working with the military and observing how they train and prepare War fighters in the crawl, walk, and run philosophy of training the one thing that has shined the brightest whether it is the military, a sports event, giving a speech, or even doing chores around the house is that practice, practice and more practice prepares you better no matter what stage of learning you are in. That is why I have created the FCAT 3rd Grade Study Guide which contains fifty (50) FCAT Math and fifty (50) FCAT Reading practice questions to aid the earlier learners with practice, practice, and more practice. Additionally there is the FCAT 3rd Grade Answer Key Booklet that accompanies this book. So remember no matter what you do, or how technology brings it to you practice will make you do it better.
