This book argues that that the rise of great firms - those with sustainable high return on invested capital (ROIC) - will lay the foundation for China's successful economic transformation. Drawn from the author's research on corporate finance and the Chinese economy, the author maintains that being big could be easy but means little for corporate China, especially in the context of China's transition from an investment-led economy to an efficiency-driven one. The work discusses both internal and external impediments that lead to lack of great companies in China and suggests institutional conditions which foster the rise of great companies in China, including, reversing the government's obsession with GDP, reforming the financial system, and promoting entrepreneurship. Policy makers, investors, corporate executives, and MBA students and scholars will appreciate case studies of Huawei, Alibaba, Xiaomi, and Lenovo, among others, that illustrate the endeavors made by Chinese entrepreneurs at the grassroots level and highlight what makes successful companies in China.

This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th-20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing process conducted by the *Journal of Risk and Financial Management*. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note,

some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on “Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run” by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO2 emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO2) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam’s business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-

GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam’s trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam.

The impact of the economic downturn and the increase in financial scandals emerging from major corporations has generated a growing interest in governance issues and has emphasized the need for companies to be transparent in their dealings with shareholders and the markets. Although the issues in Asia are fundamentally similar to those in the rest of the world, there are some crucial differences in the way in which Asian corporations acknowledge and confront these issues and in the political and legal frameworks under which they operate. Using examples of good and bad governance, Roche analyzes if the Asian approach to governance issues is unique. Business and finance students, as well as executives with an interest in Asian business or corporate governance will find this an authoritative and insightful guide to this complex and important topic.

This highly relevant study provides an incisive analysis of a critical phase in recent East Asian financial history, exploring the underlying causes of the financial crisis that struck Indonesia during the second half of 1997. Matsumoto’s extensive commercial experience in Indonesian finance during these critical years, allows him to skilfully argue that the roots of the crisis lay in the period of capital liberalization undertaken during the boom years from 1994 to 1997 which encouraged the development of fragile and unstable financial structures, involving increased corporate leverage, reliance on external debt, and the introduction of riskier and more complicated financial instruments and transactions. In-depth fieldwork data and four detailed case studies illuminate the microeconomic foundations of the crisis, showing how Indonesian capitalists sought to liquidate their Indonesian assets without losing control of their corporate empires, by taking advantage of increased access to foreign loans and complex financial re-engineering, actions which ultimately precipitated instability and crisis throughout the entire financial system. Finally, it reflects upon the policy implications of this episode, putting forward the case for comprehensive capital controls for open and developing economies until they establish appropriate financial institutions to monitor and manage the level of indebtedness and the volatility of capitalists’ behaviour.

This volume addresses the two key financing constraints that firms must face: taxation and finance. The taxation analysis focuses on how tax systems in selected Asian economies affect growth and the relative competitiveness of foreign and domestic enter-

prises. It outlines key features of the systems and provides a set of guidelines for potential foreign investors as to how these systems compare with each other (and with those in Canada and the United States) and predict future developments (including financial innovation and the internet). The study of financial frameworks focuses on corporate finance and analyzes the relationship between financing patterns and the level of development of securities markets and financial liberalization in the region. It focuses on the issue of how firms finance investments and the extent to which they depend on retained earnings and funding obtained through the market. Both studies include Japan, China, Hong Kong, Taiwan, Singapore, Korea, Indonesia, Malaysia, Thailand and Philippines. Both also consider the implications of taxation for savings and investment flows in domestic economies and across borders-and the implications of public sector demand for savings for corporate financing constraints.

Research in this book focuses on the strategic behaviour of the State as a shareholder in businesses, and the implications it has for the other shareholder(s) and business performance. It investigates the institutional characteristics of State-linked and State-owned firms (SIEs & SOEs), in emerging markets using Vietnam as a case study with comparative analysis on China and selected ASEAN countries. In doing so, the book adopts an evidence-based approach to explain the State's role as a shareholder in the different aspects of corporate governance, including CEO appointment, board structure and impact of State ownership on business strategy and performance. It highlights the influence of the State as a shareholder by investigating institutional factors consistent with "path dependence" theory, which postulates that the initial and underlying structure of an economy influences its performance. In addition, the book presents empirical evidence of the dynamics of corporate governance arising from interactions between the State

and other shareholders, which has not yet been addressed in the literature, and is distinctive in providing new insights from both qualitative and empirical research on how to successfully navigate the emerging market business environments from the perspective of the State as an "owner-participant". Explaining the theoretical constructs in corporate governance in State-invested firms, empirical research methodologies, and results to draw and validate inferences, the book is comprehensive and provides a practical guide for practitioners as well as a reference for academics, undergraduate and postgraduate students. The new theoretical models proposed integrate traditional political-economic and agency theories, which also underpin tertiary business courses and academic research.

This is one of the first books that comprehensively explains fundamental theories of natural resource and infrastructure public private partnership (NRI-PPP) projects and project finance. NRI-PPP projects and project finance have been adopted in natural re-

source development, including oilfield development, mine development, and liquefied natural gas production; manufacturing, such as petrochemistry, which uses crude oil; and infrastructure-related projects such as railways, roads, airports, ports, water supply, waste treatment, communications, and electricity. An important concern during negotiations among the various stakeholders is the lack of congruence between theories underlying NRI-PPP projects and project finance and the particular, real-life business considerations of the subject project and lack of understanding of the key theories. Studies that help us understand NRI-PPP projects and project finance have been developed based on economic theories such as contract theory and the economics of law by several distinguished professors. Until now, however, in financial institutions staff in departments that specialize in project finance have developed an understanding of the theories underlying NRI-PPP projects and project finance primarily through on-the-job training during which business points of view were passed on. Principles and theories regarding NRI-PPP projects and project finance have not been taught through textbooks in these firms. In fact, there are only a few books that explain the fundamental theories for actual project structures or actual project finance. This book attempts to fill that gap by making clear the fundamental theories that exist behind the actual projects and project finance in relation to natural resources and infrastructure. Readers of this book will include not only professionals in various private sectors and banks but also those involved in PPP projects in the public sector.

In a business climate marked by escalating global competition and industry disruption, successful mergers and acquisitions are increasingly vital to the growth and profitability of many corporations. If history is any guide, 60 to 70 per cent of new mergers will fail – and will destroy shareholder value. To date, analyses of the M&A failure rate tend to focus on individual causes – e.g., culture clashes, valuation methods, or CEO overconfidence – rather than examining the problem holistically. *The Value Killers* is the first book based on a holistic analysis of successful and unsuccessful transactions. Based on research, interviews with top executives, and case studies, this book identifies the key causes of failures and successes and offers prescriptions to increase the odds that future transactions will deliver all the anticipated synergies. *The Value Killers* offers practical advice in the form of 5 Golden Rules.

These rules will help managers and boards to ensure that target companies are properly valued; potential synergies and risks are identified in advance; checks and balances are installed to make sure that the pros and cons of the transaction are rationally and objectively evaluated; mechanisms are created that will trigger termination of bad deals; and obstacles to successful post-merger integrations are assessed (and solutions developed) before the deal closes. Each chapter includes questions for executives considering future M&As to allow them to see whether they are on the right track or not.

Combining the expertise of two consultants and academics from East and West, this book provides an international guide for family businesses, showing how to identify and implement the best governance strategies. Packed with case studies and interviews, this is the ultimate guide for family businesses wanting to achieve long-term success.

Their text develops intuitive thinking while simultaneously helping students develop problem solving and computational skills. It then shows students how to apply intuition and analytical skills to decision making while integrating it all with valuation and building shareholder value.
