This book gives readers a present and critical view of different language and linguistic issues in selected Asian contexts. The language aspect of the manuscript explores various areas of English language learning and teaching while the linguistic aspect looks at different fields such as sociolinguistics, semantics, stylistics, corpus-based studies, translation studies and cultural studies. These aspects also provide distinct tangents in researching language for they offer significant points of view and outcomes in understanding the influence and/or the function of cultures when dealing with either spoken or written discourses involving native or non-native speakers. Such dynamics are instrumental in bringing about wider range of topics pertinent to the transdisciplinary nature of the current research theme in this part of the world. Substantially, the major sub-disciplines included in the manuscript frame both theoretical and hands-on implications for more rigorous innovations and expansions in the respective area of investigation.

This book explores several branches of the social sciences and their perspectives regarding their relations with decision-making processes: computer science, education, linguistics, sociology, and management. The decision-making process in social contexts is based on the analysis of sound alternatives using evaluative criteria. Therefore, this process is one that can be rational or irrational, and can be based on knowledge and/or beliefs. A decision-making process always produces a final decision, which may or may not imply prompt action, and increases the chances of choosing the best possible alternative. The book is divided into four main parts. The concepts covered in the first part, on computer science, explore how the rise of algorithms and the growth in computing power over the years can influence decision-making processes. In the second part, some traditional and innovative ideas and methods used in education are presented: compulsory schooling, inclusive schools, higher education, etc. In turn, the third part focuses on linguistics aspects, and examines how progress is manifested in language. The fourth part, on sociology, explores how socie-

ty can be influenced by social norms, human interactions, culture, and religion. Management, regarded as a science of the decision-making process, is explored in the last part of this book. Selected organizations' strategies, objectives and resources are presented, e.g., human resources, financial resources, and technological resources. The book gathers and presents, in a concise format, a broad range of aspects regarding the decision-making process in social contexts, making it a valuable and unique resource for the scientific community.

More than ten years after the adoption of the UN Guiding Principles on Business and Human Rights, this book critically reviews the achievements, limits and next frontiers of business and human rights following the protect, respect, remedy trichotomy. The UN Guiding Principles acted as a catalyst for hitherto unprecedented regulatory and judicial developments. The monograph by Macchi proposes a functionalist reading of the states duty to regulate the transnational activities of corporations in order to protect human rights and adopts a holistic approach to the corporate re-

sponsibility to respect, arguing that environmental and climate due diligence are inherent dimensions of human rights due diligence. In the volume emerging legislations are assessed on mandatory human rights and environmental due diligence, as well as the potential and limitations of a binding international treaty on business and human rights. The book also reviews groundbreaking litigation against transnational corporations, such as Lungowe v. Vedanta or Milieudefensie v. Shell, for their human rights and climate change impacts. The book is primarily targeted at academic and non-academic legal experts, as well as at researchers and students looking at business and human rights issues through the lenses of legal studies (particularly international law and European law), political sciences, business ethics, and management. Additionally, it should also find a readership among practitioners working in the public or private sector (consultants, CSR officers, legal officers, etc.) willing to familiarize themselves with the expanding areas of liability, financial and reputational risks connected to the social and environmental impacts of global supply chains. Chiara Macchi is currently Lecturer in Law at Wageningen University & Research in The Netherlands.

This monograph offers a comprehensive account of the L1-acquisition and use of yes-no questions in English from a usage-based, construction grammar perspective. On the basis of the BNC and a high-density, longitudinal CHILDES corpus, the book explores two issues which have largely been neglected in previous research: 1. the prevalence of non-canonical questions (such as elliptical and declarative questions) in adult-to-adult as well as child(-directed) speech and the L1-acquisition of these structures. 2. The discourse-functional properties of both canonical and non-canonical yes-no questions, especially with regard to their influence on the acquisition process.

For the last 400 years, since the birth of the Stuart Dynasty in England with James VI in the early 17th century, when the contraction of negative forms of the English sentence began in earnest, (canonical) tag questions have been a great fascination to many users of English. Within the last sixty years, beginning with the birth of the generative paradigm, tag questions have equally been of particular interest to many scholars of linguistics from a variety of perspectives, especially those concerned with the syntax-semantics and socio-pragmatics of the English sentence. With the spread of English to other countries and the emergence of new Englishes in the post-colonial context of the non-native varieties spoken in former British colonies, it is particularly interesting to see how and why tag questions have evolved over time in daily usage in both form and function in different English speech communities around the world. The essays gathered here focus on this evolutionary trend of English tag questions, with special attention on the exoticisms that characterize current usage.

With a focus on client-centred care, this book provides an introduction to developing cultural competence in the health care setting. A unique presentation covering both theory and practice, the book begins with a strong foundational model for understanding culture. It then introduces general knowledge on culture which can be provided to a variety of settings, and ends with clinical applications illustrating how to apply knowledge and awareness to a variety of populations. With contributions from twelve leading experts, material is drawn from a wide range of health care settings and has strong practical coverage throughout. Unique approach: looks at populations the way health care workers encounter them, not by ethno-cultural/religious labels Multidisciplinary approach to writing reflects a variety of perspectives and direct front-line experience Discussion is broad and inclusive, integrating different perspectives, but also makes visible the different paradigms used to approach the topic Case studies and questions encourage critical thinking and dialogue

Book discusses VBAC (vaginal birth after caesarean).

In six new essays, philosopher and award-winning author Joseph Heath explores the connection between principles of justice and the institutional arrangements required to achieve them. Topics include the significance of status inequality, the question of open borders and immigration, the stigmatization of self-control failure, and debates over racial inequality in the United States. Ultimately, Cooperation and Social Justice reveals that one cannot think about questions of social justice without also taking seriously the institutional arrangements through which they may or may not be realized.

This book provides the first compilation of demographic research focused on transgender, nonbinary, and gender minority populations. It discusses the measurement and conceptualization challenges that shape demographic knowledge of these populations, including how we capture gender on surveys. It examines our current knowledge of demographic characteristics and health disparities and outcomes. Overall, this research demonstrates the increasing knowledge of gender variation at the population level. At the same time, it reveals the need for better survey questions, additional data, and inquiry into a broader subset of demographic questions for these populations as there is little understanding of fundamental demographic information, including migration or spatial distribution of transgender populations, fertility and household structure, labor market outcomes, or broader patterns of morbidity and mortality. The research set forth in this book lays the groundwork for a trans demography that would produce population-level knowledge of these populations and points researchers and policymakers toward needed areas of research, conceptualization, and data collection.

The British Study Edition of the Urantia Papers is based on the standard SRT text, but uses the metric system and adds a critical apparatus of textual variants and study notes.

This book, the second of two volumes, explores the challenges and opportunities presented by the increased presence of social media within African politics. Electoral processes in Africa have assumed new dimensions due to the influence of social media. As social media permeates different aspects of elections, it is ostensibly creating new challenges and opportunities. Most evident are the challenges of hate speech, misogyny and incivility. This book considers the impact of digital media before, during, and after elections, as well as authorities' attempts to legislate and regulate the internet in response. Contributions to this volume analyse social media posts, transgressive images, newspaper articles, and include case studies of Algeria, Zimbabwe, Kenya, South Africa, Nigeria and Uganda. This results in the delivery of an original depiction of the use of social media in a variety of African contexts. This book will appeal to academics and students of media and communication studies, political studies, journalism, sociology, and African studies.

In this book, the author challenges reductive views of emergent literacy prevalent in many of today's kindergarten and pre-K classrooms. As an alternative, Lysaker explains how reading wordless books with young children helps them to develop a range of comprehension abilities that are important for understanding narrative texts. Readers will find concrete methods to help them gauge, document, and respond to children as they make meaning of and respond to wordless books. Through description and analysis, the text reveals the undervalued richness of young children's emergent comprehension and the intricate, purposeful nature of their specific early thinking

activities. Before Words encourages readers to think about young children's comprehension as complex meaning-making and suggests new ways of responding to the unique sense-making tools young children use during wordless book reading. Book Features: Demonstrates how young children develop reading comprehension abilities even before learning to read print. Expands on reading as more than just a technical skill. Engages the whole child and scaffolds their formation of relationships with other people, including peers, teachers, families, and communities. Nurtures students' creativity, positive relationships with storytelling, and social-emotional growth. Offers guidance for building a wordless book library, including a selected list of books. "A breakthrough work. Prepare to have your mind opened to completely new terrain in children's literate development." —From the Foreword by Peter Johnston, The University at Albany-SUNY "Before Words is a kid-watcher's delight! Her sensitive descriptions of reading conversations provide concrete strategies that will be welcome additions to both novice and experienced teachers' toolkits!" —Deborah Wells Rowe, Vanderbilt University "Scholars of early childhood literacy development will find much of interest in this book." —Nell K. Duke, University of Michigan

The field of applied linguistics covers a diverse range of research and practice, and has developed somewhat differently in various parts of the world due to variations in local socio-cultural conditions, needs and issues. However, this local diversity does not reflect a field that is incoherent, but rather one which has a broad, shared international agenda which is invigorated by the diversity brought to the field by local perspectives. The papers in this volume represent some of the major global directions that research in applied linguistics is taking and shed light on how language is used to affect practice. The aim of this volume is to explore some of the key methods and issues which are guiding applied linguistics into the future through an examination of these issues in local contexts, thereby providing a basis for understanding the global directions the field is taking. These directions follow two historically defined paths: those related to educational studies and language teaching, and those related to social issues involving language. In the volume, half the papers focus on the former, examining issues of language teaching, language teacher education and second language acquisition, while the other half examine social issues related to language use, bilingualism and multilingualism, and language policy and planning. The collection of papers presented in this book illustrates how these traditional themes are influenced by the rising forces of globalisation and the use of technology, thus exemplifying both the new and old ways in which the study of language is realised.

Learning another language can often be a challenging task. Teacher and author Marianne Raynaud has developed an intensive program to aid teachers and students with materials that really work. Filled with unique and motivating activities, the ideas presented will help all teachers of foreign languages to assist their students to effectively and efficiently learn a new language. With more than twenty-four years of experience teaching, Raynaud details her philosophy and the techniques she has developed. The text is accompanied by a Digital Document Annex that includes more than 1,500 ready-to-use teaching materials focusing on listening, comprehension, grammar, vocabulary, and translations. The annex also contains PowerPoint presentations, audio recordings, short videos, and examples of student work. Chapters provide information about: Incorporating teamwork Establishing a core curriculum Individualizing teaching Helping students enjoy labs Writing exercises that correspond to student needs Providing a challenging workload Intended to help teachers establish a successful program, QualityTime-ESL: The Digital Resource Book provides an extensive toolbox of teaching materials from which teachers can freely choose and then adapt. This detailed guide will help teachers to create a dynamic learning course to further the teaching of English.

Using English appropriately to communicate one's thoughts can seem like a challenging task for non-native-English-speaking students. This accessible guide provides the reader with an insightful approach through which to investigate such use through the analysis of the interactive conversational undertakings of a cohort of Tunisian First-Year Preparatory Engineering Students. The findings here provide insights into the different types of students' interactions with their teachers and peers, and shed light on their classroom exchangeable patterns, dynamics, and the main zones of their proficiencies and deficiencies. They are reflective of the overall spoken discourse that is processed in the Tunisian first-year preparatory engineering classroom.
