In mathematics, Fourier analysis (*f* *ør* *i* *er*, *i* *er* /) is the study of the way general functions may be represented or approximated by sums of simpler trigonometric functions. Fourier analysis grew from the study of Fourier series, and is named after Joseph Fourier, who showed that representing a function as a sum of trigonometric functions greatly simplifies the study of heat transfer.

Before we jump into filtering, I'll have to give some background on LTI system analysis. The fundamental way to describe the response of an LTI system is via the impulse response . That is, we use the impulse function as the input signal and view the corresponding output signal, known as the impulse response.
