As more businesses in today's economy are moving towards a global reach, it is essential for finance students to understand how the fundamentals of corporate finance relate to multinational firms. Shapiro's Multinational Financial Management 9th Edition provides that conceptual framework within which key financial decisions of a multinational firm can be analyzed. The author's comprehensive approach is to treat international financial management as a natural extension of the principles learned in the first course in financial management. The book builds its coverage of international finance on the framework of valuation established by domestic corporate finance. It can be used in courses in International Financial Management and International Finance at the upper-level undergraduate or MBA level.

Ross, Essentials of Corporate Finance 10e focuses on what undergraduate students with widely varying backgrounds and interests need to take away from a core course in business or corporate finance. The goal is to convey the most important concepts and principles at a level that is approachable for the widest possible audience. To achieve this goal, subjects are distilled down to the bare essentials, while retaining a decidedly modern approach to finance. In addition, understanding the "why" is just as important, if not more so, than understanding the "how" - especially in an introductory course. Readability and pedagogy are key throughout Essentials 10e. The text is written in a relaxed, conversational style that invites the students to join in the learning process rather than being a passive information absorber. The new edition downplays purely theoretical issues and minimises the use of extensive and elaborate calculations to illustrate points that are either intuitively obvious or of limited practical use. There are 3 basic themes visible throughout the book: emphasis on intuition/common sense, a unified valuation approach, and a managerial focus.

How to make sound investment decisions: Based on a continuing case study this comprehensive analysis paces a sure way through the variety of investment appraisal methods. The companion text 'Grundlagen der Investitionsrechnung: Eine Darstellung anhand einer Fallstudie' is available in German.

Foundations of Airline Finance: Methodology and Practice is a textbook that comprehensively covers, at a basic level, all aspects of the subject, bringing together many of the numerous and informative articles and institutional developments that have characterized the field of airline finance in the previous two decades. In the early chapters, the reader is introduced to the elementary theoretical foundations that underpin the role of finance in the airline industry. Critical topics, such as the time value of money, the notion of risk and return, and the complex nature of costs (fixed, semi-fixed, variable, and marginal) are discussed and illustrated with concrete examples. This is followed by an in-depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics, such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM), are covered. The role of capital and asset management is then explained in the following chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier; these applications include hedging, the buy versus lease decision for aircraft and the question of the valuation of assets (mainly aircraft). Moreover, specific methods for actually calculating internal valuation are presented and evaluated. Foundations of Airline Finance: Methodology and Practice will be of greatest value to students who are contemplating entering financial management in the air transportation industry; however, the text will also serve as an accessible and comprehensive reference for industry professionals.

Fundamentals is organized around the key concepts of modern finance. These concepts, properly explained, simplify the subject. They are also practical. In Compensation and Benefit Design , Bashker D. Biswas shows exactly how to bring financial rigor to the crucial "people" decisions associated with compensation and benefit program development. This comprehensive book begins by introducing a valuable Human Resource Life Cycle Model for considering compensation and benefit programs. Next, Biswas thoroughly addresses the acquisition component of compensation, as well as issues related to general compensation, equity compensation, and pension accounting. He assesses the full financial impact of executive compensation programs and employee benefit plans, and discusses the unique issues associated with international HR systems and programs. This book contains a full chapter on HR key indicator reporting, and concludes with detailed coverage of trends in human resource accounting, and the deepening linkages between financial and HR planning. Replete with both full and "mini" case examples throughout, the book also contains chapter-ending exercises and problems for use by students in HR and finance programs. ¿ More than ever before, HR practitioners must empirically demonstrate a clear link between their practices and firm performance. In Investing in People , Wayne F. Cascio and John W. Boudreau show exactly how to choose, implement, and use metrics to improve decision-making, optimize organizational effectiveness, and maximize the value of HR investments. They provide powerful techniques for looking inside the HR "black box," implementing human capital metrics that track the effectiveness of talent policies and practices, demonstrating the logical connections to financial and line-of-business, and using HR metrics to drive more effective decision-making. Using their powerful "LAMP" methodology (Logic, Analytics, Measures, and Process), the authors demonstrate how to measure and analyze the value of every area of HR that impacts strategic value.
