Book:Aircraft Structural Analysis Fundamentals - Wikipedia

Most aircraft structural components are fabricated from thin metal sheet, so that stresses across the thickness of the sheet are usually negligible. Assuming, say, that the z axis is in the direction of the thickness, then the three-dimensional case of Section 1.3 reduces to a two-dimensional case in which s_z , t_{xz} , and t_{yz} are all zero. This condition is known as plane stress; the equilibrium equations
