## 9TSV1K - FRANKLIN GIOVANNY

The only reference book which discusses the usage of nanoprobe for structure determination, in an industry where miniaturisation is the main focus. Designed for newcomers as well as professionals already in the industry.

Published in 2001: Abbreviations, nicknames, jargon, and other short forms save time, space, and effort - provided they are understood. Thousands of new and potentially confusing terms become part of the international vocabulary each year, while our communications are relayed to one another with increasing speed. PDAs link to PCs. The Net has grown into data central, shopping mall, and grocery store all rolled into one. E-mail is faster than snail mail, cell phones are faster yet - and it is all done 24/7. Longtime and widespread use of certain abbreviations, such as R.S.V.P., has made them better understood standing alone than spelled out. Certainly we are more comfortable saying DNA than deoxyribonucleic acid - but how many people today really remember what the initials stand for? The Abbreviations Dictionary, Tenth Edition gives you this and other information from Airlines of the World to the Zodiacal Signs.

This book combines the experience of 225 experts on 900 pages. Scientists worldwide are currently overwhelmed by the ever-increasing number and diversity of genome projects. This handbook is your guide through the jungle of new methods and techniques available to analyse gene expression - the first to provide such a broad view of the measurement of mRNA and protein expression in vitro, in situ and even in vivo. Despite this broad approach, detail is sufficient for you to grasp the principles behind each method. In each case, the authors weigh up the advantages and disadvantages, paying particular attention to the automated, high-throughput processing demanded by the biotech industry. Completely up to date, the book covers such ground-breaking methods such as DNA microarrays, serial analysis of gene expression, differential display, and identification of open reading frame expressed sequence tags. All the methods and necessary equipment are presented visually in more than 300 mainly colour illustrations to assist their step-by-step reproduction in your laboratory. Each chapter is rounded off with its own set of extensive references that provide access to detailed experimental protocols. In short, the bible of analysing gene expression.

We are currently facing a global problem caused by increasing levels of greenhouse gases, mostly derived from fossil fuels, resulting in climate change. Communities want an affordable and secure supply of power alongside emissions reductions. Coal electricity generation offers a secure and affordable supply, but, currently, this comes with high emissions. This volume examines efforts by both industry and governments to develop a cleaner use of low rank coals. It presents leading research on creating affordable, high-quality fuel for efficient power generation, with a trajectory toward affordable zero-emissions production. This book will be of interest to organisations active in developing clean usage of coal and which conduct research on low emissions power. It will also contribute to policy development of low-, and zero-emissions coal power generation, particularly in regions with abundant deposits of low-cost brown coal, lignite, and subbituminous coal, including the US, China, Europe, India, Indonesia, and Australia.

With about 200,000 entries, StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations, acronyms, contractions and symbols within astronomy, related space sciences and other related fields. As such, this invaluable reference source (and its companion volume, StarGuides Plus) should be on the reference shelf of every library, organization or individual with any interest in these areas. Besides astronomy and associated space sciences, related fields such as aeronautics, aeronomy, astronautics, atmospheric sciences, chemistry, communications, computer sciences, data processing, education, electronics, engineering, energetics, environment, geodesy, geophysics, information handling, management, mathematics, meteorology, optics, physics, remote sensing, and so on, are also covered when justified. Terms in common use and/or of general interest have also been included where appropriate.

The aim of the symposium was to provide a plenum for the exchange of ideas and experience of the key approaches, modelling and measurement for geotechnical engineering.

"Perhaps to a greater extent than any other army, the German Armed Forces employ military abbreviations on their maps and charts, on task force tables of organization, on direction and location sign posts in combat zones, on field orders, and, in short, in every case where abbreviations may possibly be used. These abbreviations are often used in connection with military symbols

(see German Military Symbols, January 1943, Military Intelligence Service). A thorough knowledge of both abbreviations and symbols is therefore essential to military personnel engaged in the interpretation of captured documents."--Page 1.

After the lesson learned during last years and following the successful edition of EC-Web 2009, for its 11th edition EC-Web tried to provide a clearer description of the electronic commerce universe focusing on some relevant topics. The main focus was not only on Internet-related techniques and approaches. The aim of EC-Web 2010 was to also cover aspects related to theoretical foundations of e-commerce, business processes as well as new approaches exploiting recently emerged technologies and scenarios such as the Semantic Web, Web services, SOA architectures, mobile and ubiquitous computing, just to cite a few. Due to their central role in any realistic e-commerce infrastructure, security and privacy issues were widely considered, without excluding legal and regulatory aspects. The choice of the above relevant topics directly reflects the fact that electronic commerce (EC), in the last few years, has changed and evolved into a well-established and founded reality both from a technological point of view and from a scientific one. Nevertheless, together with its evolution, new challenges and topics have emerged as well as new questions have been raised related to many aspects of EC. Keeping in mind the experience of the last edition of EC-Web, we maintained, for its 11th edition, the structure and the scientific organization of EC-Web 2009, aiming to highlight the autonomous role of the different (sometimes heterogeneous) aspects of EC, without missing their interdisciplinary scope.

This is the first in-depth analysis of social and political changes within the party structure of the German Democratic Republic (G-DR) during the period 1954-1968 which have been largely misun-

derstood in the West. The book focuses on and provides detailed information about the Socialist Unity Party (SED), the dominant Communist organization in East Germany. Ludz investigates the party's organization, the development of the social structure of its Central Committee, and party ideology. The text is documented by extensive tabulated material&-59 detailed tables in all&-containing data concerning shifts and longevity tendencies of Central Committee personnel and on other high-ranking party functionaries.

Analog computing is one of the main pillars of Unconventional Computing. Almost forgotten for decades, we now see an ever-increasing interest in electronic analog computing because it offers a path to high-performance and highly energy-efficient computing. These characteristics are of great importance in a world where vast amounts of electric energy are consumed by today's computer systems. Analog computing can deliver efficient solutions to many computing problems, ranging from general purpose analog computation to specialised systems like analog artificial neural networks. The book "Analog Computing" has established itself over the past decade as the standard textbook on the subject and has been substantially extended in this second edition, which includes more than 300 additional bibliographical entries, and has been expanded in many areas to include much greater detail. These enhancements will confirm this book's status as the leading work in the field. It covers the history of analog computing from the Antikythera Mechanism to recent electronic analog computers and uses a wide variety of worked examples to provide a comprehensive introduction to programming analog computers. It also describes hybrid computers, digital differential analysers, the simulation of analog computers, stochastic computers, and provides a comprehensive treatment of classic and current analog computer applications. The last chapter looks into the promising future of analog computing.

On-line HDF represents a major technical development in the delivery of hemodialysis therapy: It combines the properties of increased diffusion available in current high-flux membranes with convective removal of between 6 and 30 liters per treatment and requires the use of ultrapure water and online filtration of replacement fluid. On-line HDF has been successfully introduced in Europe and Asia and is routinely prescribed for dialysis patients in these regions. The book at hand summarizes the history and achievements of on-line HDF in four parts: A report of the technological development in both machine and fiber/dialyzer is followed by a description of the challenges encountered in the evolution of on-line HDF, collecting the accounts of clinical key opinion leaders who had been involved in its early application. The third part presents a comprehensive review of the clinical results achieved with on-line HDF from its inception to the present times, in which it represents the clinical golden standard. The fourth and final part is dedicated to on-line HDF as a 'vision' for the future.

In this book, bromide and iodide scintillators, which have been investigated for the past four years, are presented. Three major groups of compounds were studied; lanthanide trihalides LnX<sub>3</sub>, (pseudo)-elpasolites M<sub>2</sub>ALnX<sub>6</sub> and ternary halides AmlnnX<sub>o</sub>. Where M and A are alkali cations, Ln is a rare earth cation and X is a halide anion. Some materials show interesting  $\gamma$ -scintillation properties. LuI<sub>3</sub>: Ce<sup>3+</sup>, one of lanthanide trihalides, has a record high light output of 98,000 photons/MeV and a fast response of 35 ns. Two other groups, (pseudo)-elpasolites and ternary halides, show relatively low light yields. For thermal neutron scintillator, the focus was on (pseudo)-elpasolites M<sub>2</sub>LiLnX<sub>6</sub> and ternary halides LimLnnX<sub>o</sub> groups. Rb<sub>2</sub>LiYBr<sub>6</sub>: Ce<sup>3+</sup> shows an excellent neutron peak resolution of 3.6 %. This is the best neutron peak resolution ever reported. Together with the large  $\gamma$ / $\beta$  ratio of 0.74, Rb<sub>2</sub>LiYBr<sub>6</sub>: Ce<sup>3+</sup> offers the possibility of excellent neutron/ $\beta$  discrimination. The highest thermal neutron scintillation light yield of 83,000 photons/neutron is also reported for Rb<sub>2</sub>LiYBr<sub>6</sub>: Ce<sup>3+</sup>. The analysis for all halide scintillators is also presented. Limitation in their light yields and response times is discussed.

The electronics industry underwent a rapid evolution from thick to thin films during the last decade. Electrochemical technology played an important and often decisive role in the direction of this evolution. Applications include plating through mask technology, plating for thin film heads, plating for high density magnetic thin film, selective etching technology, etc. New electrochemical approaches have also been developed which will play key roles in the electronics industry. This book reports on the latest progress in electrochemical processes, including fundamentals and applications. Additional volumes dealing with more specific applications of electrochemistry are also planned.

A comprehensive account of the role of the imagination in Hegel's philosophy. Filling an important gap in post-Kantian philosophy, Hegel's Theory of Imagination focuses on the role of the imagination, and resolves the question of its apparent absence in Hegel's Phenomenology of Spirit. Jennifer Ann Bates discusses Hegel's theory of the imagination through the early and late Philosophy of Spirit lectures, and reveals that a dialectic between the two sides of the imagination (the "night" of inwardizing consciousness and the "light" of externalizing material) is essential to thought and community. The complexity and depth of Hegel's insights make this book essential reading for anyone seriously interested in understanding how central the imagination is to our every thought. Jennifer Ann Bates is Visiting Scholar of Philosophy at the University of Guelph and at the Centre for Comparative Literature at the University of Toronto.

Control in Power Electronics and Electrical Drives contains the proceedings of the Second International Federation of Automatic Control Symposium held in Düsseldorf, Germany, on October 3-5, 1977. The symposium provided a forum for discussing the effects of converter control on the design of electrical machines. Comprised of 102 chapters, this book begins by focusing on control systems employing electronic power converters, along with converter circuits and converter control procedures. The next section deals with the behavior of inverter-fed electrical machines and requirements imposed by converter operation. Topics covered include the status of power thyristors and rectifiers; the dynamic performance of converter-fed synchronous motors; and open loop control of a linear vernier reluctance motor in a stepping mode. Subsequent sections explore converter-fed alternating current and direct current drives; applications of controlled industrial drives; and solid-state energy conversion. A number of methods for analyzing power electronic circuits are discussed and illustrated. This monograph will be of interest to electronics and electrical engineers.
