As both [practice and walk-in centre] nurses continue to adapt to the constant on-going change demanded by both the public and the government paymasters they will face ever-growing self-questioning about their role responsibilities and their need to remain competent, knowledgeable and safe practitioners. Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report *The Future of Nursing: Leading Change, Advancing Health*, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

Over a third of all consultations in general practice are now conducted by nurses. The consultation is the key element of primary care, with patients being more satisfied with the care given by clinicians who have good communication skills. Poor communication or dissatisfaction with a consultation is reported to be one reason why patients decide not to attend or do not take a prescribed treatment. Patients need to be satisfied with the consultation, understand their condition and understand the reasons for their treatment or management plan. This book has been written to reinforce good consultation and communication skills and highlights areas where readers might wish to review and improve their own consultation techniques. This is done through case studies and scenarios that are likely to be common in many practices. Although the text and scenarios relate to practice nurse consultations, the content can be transferred to all primary care nursing settings.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
