What this book will teach you include: How to set up an indoor grow room or grow facility How to give your plants everything they need in terms of light, water, airflow and nutrients How to grow, harvest and dry your marijuana This book will give you the Experience of the beautiful evolution from seeds to full blown yield. Grow your production from a few plants in the back of your closet to a medium or large commercial production in a professionally designed grow room If taking your growing to the next level excites you, read on now! We love working with new growers and are happy to help and offer advice based on our experience setting up some of the largest grow operations in the country, like this one with over \$30 million in annual revenue, and this one which will do twice that much when finished. Growing outdoor will leave your plants at the mercy of environmental circumstances and mother nature - for the better or for the worse. With an indoor hydroponic production on the other hand, you are in charge. Creating a grow room will allow you to influence all factors that limit or accelerate the growth of our plants, and master the art of maximize yields and

return on your investment. From choosing the best grow lights to deep water culture, from fans to wall paint - we've got you covered. You need to understand that setting up the infrastructure for hydroponics might take more time and investment at the start but can produce yield levels otherwise impossible to reach. As with any business, start by reflecting on why you want to do this. What's in it for you? What are your reasons for getting started (financially, professionally and emotionally)? Research the market circumstances and legal considerations in the area you plan to operate. Your business will be very different depending on your goals: Do you want to grow medical marijuana or recreational? At what scale? And in what state? What will your team and setup look like? How many people will be involved? How much is the investment for setting up the grow room? How much are the monthly costs for water, electricity and other supplies? Can you grow in your house or do you need a commercial area? How will you be distributing your weed buds? If you are considering growing marijuana as a business - treat it like a business. Do your research beforehand. Identify your target customer and how you're going to reach them. Research the balance of supply and demand in your market -- your work will be much easier in a market that is supply constrained, so that may influence where you decide to set up your grow. What are the financial and legal risks and how can you manage these risks? Are you willing to take a legal risk or not? A business plan can help you structure your thoughts as well as forecast your cashflow. By the way: you do not have to have prior experience in growing weed to get started. What it will take is your genuine interest in taking good care of your plants and your ability to work hard, study hard and make changes on the way according to your learnings. It's not rocket science, but it needs dedication and passion. And you can do it, too. This book is a manual to growing marijuana hydroponically.

Soil-less gardening may seem like an unbelievable idea, but many gardeners have discovered utter joy in Hydroponics Gardening. Some people call it art, others label it science, but many would agree that it is an adventure, similar to choosing a road less taken. Hydroponics Gardening is a branch of hydroculture which grows plants in a water-based solution, taking soil out of the equation - certainly not the type of gardening you see every day. Hydroponics Gardening is a material aimed at inspiring gardeners to

try their hands, or thumbs, into a non-conventional way of growing plants. It covers all the essential aspects of this type of gardening, beginning with choosing the appropriate gardening system, the requirements of setting up your own hydroponics garden, as well as how to gain control over certain elements to make your plants grow successfully in your hydroponic garden. This book also covers how to naturally and chemically control pests in your garden and ways to ensure that your plants receive the right lighting and humidity. It is also essential to know that most plants – fruits, herbs and vegetables, may be grown hydroponically. However, it is important to note that some may thrive better in a hydroponic garden because of certain conditions, such as the limitations of your space, the appropriateness of your chosen system and the extensiveness of your experience in hydroponic gardening. This resource material will point you to the right crops that can successfully be grown in a hydroponic garden, as well as some pointers on how to extend your plants' growing season and ensure excellent yields during harvest time. With its own fair share of challenges and rewards, Hydroponics Gardening is a great way to unleash the powers of your green thumb, ensure healthy consumption of fruits and vegetables as well as promote sustainability from the garden to the dining table.

Have you ever thought about starting a new business that doesn't require a lot of time, space, and investment? In this book, I want to tell you about this new business idea that can allow you to make a thousand dollars or more a week! Microgreens are a new category of vegetables that are harvested shortly after the first set of true leaves form. Some chefs in California have been using them since the mid-1980s, but the demand for microgreens has only recently grown exponentially. That's because microgreens are healthy foods that contain many more nutrients than plants harvested at an advanced stage of maturity. For this reason, they are recommended by nutritionists and are popular among healthy lifestyle enthusiasts and environmentally conscious people. Growing microgreens is quick and easy, with most microgreen varieties reaching a harvestable size in about two weeks, allowing for up to two dozen harvests in a year. Only some basic equipment is need-

ed, and you don't have to worry too much about the plants. You can grow microgreens in a spare room of your house or in a small garage. Once or twice a week, you can harvest and sell your microgreens. In this book you will find: Which microgreens are best to start with, which are the easiest to grow, and which are the most difficult Step-by-step instructions for soil and hydroponic growing methods. How to solve the most common problems with microgreens. How to build a grow rack with readily available components without breaking the bank. How to set up a proper vertical farm in a small 60 square foot space. How to identify your market niche. Where to sell your products. How to build your brand. How to choose the best packaging. How to set prices. How to create labels and barcodes. How to comply with hygiene and food safety regulations. If you have no intention of selling your produce, but are curious to learn more about microgreens, I definitely recommend reading the book because this is not just a business book. Like I said, microgreens are incredible foods that are great for your health and are not easy to find on the market. By reading this volume, you will learn how to grow them yourself at home. This way you will always have a very fresh product with unique properties available for your consumption. What are you waiting for to get started? Start reading the book now. The world of microgreens will soon have no more secrets for you!

Glad to know you're interested in growing your own cannabis plants for the first time! But before you flex that green thumb of yours, understand that growing marijuana indoors presents a unique set of challenges for the new hobbyist, and the sheer volume of information available on the subject can be overwhelming. The information on indoor cannabis growing in this book will help simplify the process for you into clear, easy-to-digest sections designed to help the first-time grower get started. The first step in setting up your personal cannabis grow is creating a suitable space in which to do it. This space doesn't need to be the typical grow "room; it can be in a closet, tent, cabinet, spare room, or a corner in an unfinished basement. Just keep in mind that you'll need to tailor your equipment (and plants) to fit the space. When designing your space, you'll need to take into account not only the amount of room your plants will need, but also your lights, ducting, fans, and other equipment, as well as leaving enough room for you to work. Cannabis plants can double, even triple in size in the early stage of flowering, so make sure you have adequate head space! If your grow room is a cabinet, tent, or closet, you can simply open it up and remove the plants to work on them; otherwise, you'll need to make sure you leave yourself some elbow room. Make sure your space is easily sanitized; cleanliness is important when growing indoors, so easy-to-clean surfaces are a must. Carpeting, drapes, and raw wood are all difficult to clean, so avoid these materials if possible. The quality of light in your grow room will be the number one environmental factor in the quality and quantity of your cannabis yields, so it's a good idea to choose the best lighting setup you can afford. Plants need fresh air to thrive, and carbon dioxide (CO2) is essential to the process of photosynthesis. This means you will need a steady stream of air flowing through your grow room, easily achieved by means of an exhaust fan placed near the top of the room to remove the warmer air, and a filtered air inlet on the opposite side near the floor. You'll need to ensure that temperatures remain within a comfortable range for your plants, between 70 degrees F and 85 degrees F when lights are on and between 58 degrees F and 70 degrees F when they are off. Some varieties of cannabis (generally indica strains) prefer the lower side of the range, while others are more tolerant of higher temperatures.

IF YOU WANT TO DISCOVER HOW TO BUILD AN HYDROPONIC SYSTEM, THEN KEEP READING... Hydroponics is a means of growing plants without soil. It makes use of nutrient-rich water, or a nutrient solution as well as techniques that allow the plant to grow. You can also use sand or gravel, with added nutrients. Hydroponics is a division of hydroculture and is a way of cultivating plants with the use of mineral nutrient solutions and water and without soil. Terrestrial herbs may be cultivated with their roots in the mineral solution. They may be also grown on inert medium such as mineral wool, biochar, gravel, perlite, coconut husk and expanded clay pebbles. You should read this book because it is the most fundamental lesson you will ever learn when it comes to growing hydroponically. As a food factory, a plant should have an endless supply of high-quality raw materials for it to continue producing new stem, leaf, flowers, and fruit, which we see as growth. Because plants are not as agile as humans, it is far more difficult in nature to fulfill their increasing appetite than it is for us with a demand at every point in time. And as a result, plants have learned to adapt to the environment they inhabit and the climates. And in many cases, in doing so, they lost their own genetic potential. For example, if a plant is admired for its flavor and moved to a different environment, the stress can cause the plant to reduce the oils that are responsible for its savory taste. If this stress persists, it will evolve to resolve the environmental stress in future generations as the plant grows, and this adaptation may very well lead to a healthy, yet flavorless variety. Hydroponics. Perhaps this is the first time that you have heard the term. What is it? What does it do? Well, if you have tried growing plants on your own, you may be well aware that there are different types of growing methods that you can implement for yourself. However, when talking about the rather controversial marijuana growing, hydroponics mean a lot of things. Since

marijuana growing is highly regulated in our human society, hydroponics can be implemented as one of the most practical ways to grow marijuana in an indoor environment. In hydroponics marijuana growing, a sterile inert growing medium is used and not soil. The nutrients are given to the weed plants through the growing medium and the roots. The basic nutrients needed by cannabis plants include nitrogen, potassium and phosphorus. Secondary nutrients necessary for a healthy cannabis growth include magnesium, molybdenum, copper, sulfur, calcium, manganese, zinc and boron. The nutrient solution is supplied directly to the roots for maximum absorption. Growing cannabis in hydroponics is preferred by many gardeners because of the advantages it brings. Because soil is not used as grow medium, weed plants are kept away from soil-borne diseases. Although it is quite costly during the initial set-up, marijuana growing using the hydroponics system will give higher yield. - How to set up your own high-efficiency grow room- How to build your own deep water culture system that can left alone for a week or more- How to identify the most common problems and correct them- How to pick the right strain- The 6 environmental variables and how to maintain them- The difference between organic and synthetic nutrients- Why and how soil changes over time- How to mix your
