Home Theater Subwoofer Size Guide
 Take a large space. Watts (RMS-Peak) 8-inch subwoofers have

the minimum to a maximum power of 300-1200 watts. 10-inch
 subwoofers have the min to max power of 150-1200 watts. 2-inch
 subwoofers have a min to max power of 50 to 1200 watts or even
 1300 watts. 15-inch car subwoofers have the min to max power
 of.

Subwoofer Size Chart - Ultimate Guide on Subwoofer Sizes 2019
 Home theater receivers use an RCA output for their subwoofer
 connection (that's the ".1" in a 7.1 system). Some receivers have
 two subwoofer outputs, which let you easily add a second sub to
 your system. Using two subs improves bass distribution around
 your room, which is especially helpful if you have multiple seating
 locations.

What Size Speakers Do I Need for My Room? | AV Gadgets
 To get the best sound you'll need to pair your new speaker
 system with a good home theater receiver. This guide will help
 you choose the right one. You'll connect your system together
 with speaker wire and a subwoofer cable. We also recommend
 good power protection for your receiver, TV, A/V components,
 and powered sub.

How to Choose the Best Home Theater Speakers

Home theater speaker systems come in all shapes and sizes. Speakers fall into four categories of shapes and sizes: floor-standing, bookshelf, subwoofer, and in-wall speakers. Here a closer look at types of speakers: Floor-standing: These speakers can be as tall as you are, can handle the full range of audio frequencies, and may or may [...]

~~Shapes and Sizes of Speakers—dummies~~

This rule means that if you measure your room's size from the door to the adjacent wall, then use a third of its size as the space between your wall and subwoofer; you'll get better bass output. The Rule of Thirds doesn't always produce the best bass, but it reduces the occurrence of standing waves and nulls.
