"Advanced Calculus is intended as a text for courses that furnish the backbone of the student's undergraduate education in mathematical analysis. The goal is to rigorously present the fundamental concepts within the context of illuminating examples and stimulating exercises. This book is self-contained and starts with the creation of basic tools using the completeness axiom. The continuity, differentiability, integrability, and power series representation properties of functions of a single variable are established. The next few chapters describe the topological and metric properties of Euclidean space. These are the basis of a rigorous treatment of differential calculus (including the Implicit Function Theorem and Lagrange Multipliers) for mappings between Euclidean spaces and integration for functions of several real variables."--pub. desc.

"Physics" 2nd edition is an alternate version of the "College Physics" 3rd edition text by Giambattista/Richardson/Richardson. The key difference is that "Physics" covers kinematics and forces in the more traditional organization of beginning with Kinematics and proceeding to forces. ("College Physics" takes an integrated approach to forces and kinematics, introducing forces and interweaving kinematics.)

Considering Cool is a collection of stories recounting the behavior of a boy named Patrick trying to negotiate through tricky situations, stay out of trouble, and be cool. Here is an excerpt from SLIPS: A piece of ice hits my knee. "Either go home or climb out," Billy says. "You look like a dope just standing there." That's it. I feel like giving him a white wash. I am done with Billy and all of his stupid ideas. "I'm leaving." I step forward, slip, and plummet down the bank. My body smashes through the ice like a baseball through a windowpane. I lay on the shore slowly sliding into the icy water. Brown muck fills my boots. My snow pants flood with freezing water. My legs feel weighed down with rocks and I can barely move. I reach out and the ice breaks around my hands like cobwebs. The sewer smell of the pond fills my nose. My mouth fills with swill. I can't yell. I am going under. This isn't funny. Suddenly, my hair is yanked back. I cough and cough, gasping for breath. "Try pushing yourself towards shore, push off the bottom," Billy says. I don't move. "I said push off the bottom! Do it!" I turn and see him gripping my hair with one hand and a young sapling with his other. "I can't! I can't!" I say, as I continue to sink. "You have to!" Billy pulls harder on my hair and keeps me from going in any deeper. My head kills from his hair pulling. Billy won't be able to hang on forever. If he lets go, I'm finished. I need to do something immediately. I stretch my legs out, searching for the bottom, and hit nothing. The brook can't be this deep. I jam my legs down again and finally hit bottom. At last, I have something to push off of. I give it all I have and manage to move a little closer to the shore. This is just enough so Billy can grab my arms and haul me on to the snowy bank. "You all right?" Billy says. He sees me shaking. "Yea, just cold. Thanks." "Close one. You idiot." "Yea, but now I'm really dead." "What?" Billy looks puzzled. "I'm dead, I'm soaked, I'm late. My mom will murder me." "Blame me. Say I pushed you in. She'll believe that for sure." "You'll get in trouble. You don't need that." "We're friends. You'd do it for me. Get up, let's go." We start back to our houses. "I've been thinking. Maybe we could go sliding tomorrow. I know a steep hill." I look at him. "Sure."

Smith and Vollmer-Snarr's Organic Chemistry with Biological Topics continues to breathe new life into the organic chemistry world. This new fifth edition retains its popular delivery of organic chemistry content in a student-friendly format. Janice Smith and Heidi Vollmer-Snarr draw on their extensive teaching background to deliver organic chemistry in a way in which students learn: with limited use of text paragraphs, and through concisely written bulleted lists and highly detailed, well-labeled "teaching" illustrations. The fifth edition features a modernized look with updated chemical structures throughout. Because of the close relationship between chemistry and many biological phenomena, Organic Chemistry with Biological Topics presents an approach to traditional organic chemistry that incorporates the discussion of biological applications that are understood using the fundamentals of organic chemistry. See the New to Organic Chemistry with Biological Topics section for detailed content changes. Don't make your text decision without seeing Organic Chemistry, 5th edition by Janice Gorzynski Smith and Heidi Vollmer-Snarr!

With such a wide diversity of properties and applications, is it any wonder that industry and academia have such a fascination with polymers? A solid introduction to such an enormous and important field is critical to the modern polymer scientist-to-be, but most of the available books do not stress practical problem solving or include recent advances. Serving as the polymer book for the new millennium, Introduction to Polymer Science and Chemistry: A Problem Solving Approach unites the fundamentals of polymer science and polymer chemistry in a seamless presentation. Emphasizing polymerization kinetics, the author uses a unique question-and-answer approach when developing theory or introducing new concepts. The first four chapters introduce polymer science, focusing on physical and molecular properties, solution behavior, and molecular weights. The remainder of the book explores polymer chemistry, devoting individual, self-contained chapters to the main types of polymerization reactions: condensation; free radical; ionic; coordination; and ring-opening. It introduces recent advances such as supramolecular polymerization, hyperbranch-

ing, photoemulsion polymerization, the grafting-from polymerization process, polymer brushes, living/controlled radical polymerization, and immobilized metallocene catalysts. With numerical problems accompanying the discussion at every step along with numerous end-of-chapter exercises, Introduction to Chemical Polymer Science: A Problem Solving Approach is an ideal introductory text and self-study vehicle for mastering the principles and methodologies of modern polymer science and chemistry.

The flight of Gemini 4 in June 1965 was conducted barely four years after the first Americans flew in space. It was a bold step by NASA to accomplish the first American spacewalk and to extend the U.S. flight duration record to four days. This would be double the experience gained from the six Mercury missions combined. This daring mission was the first to be directed from the new Mission Control at the Manned Spacecraft Center near Houston, Texas. It also revealed that: Working outside the spacecraft would require further study. Developing the techniques to rendezvous with another object in space would not be as straightforward as NASA had hoped. Living in a small spacecraft for several days was a challenging but necessary step in the quest for even longer flights. Despite the risks, the gamble that astronauts Jim McDivitt and Ed White undertook paid off. Gemini 4 gave NASA the confidence to attempt an even longer flight the next time. That next mission would simulate the planned eight-day duration of an Apollo lunar voyage. Its story is recounted in the next title in this series: Gemini 5: Eight Days in Space or Bust.
