- Minerals Yearbook, 2014, V. 3: Area Reports: International: Asia and the Pacific. Volume III, Area Reports: International, is published as four separate reports. These regional reports contain the latest available minerals data on more than 180 foreign countries and discuss the importance of minerals to the economies of these nations and the United States. Each report begins with an overview of the region's mineral industries during the year. It continues with individual country chapters that examine the mining, refining, processing, and use of minerals in each country of the region and how each country's mineral industry relates to U.S. industry. Most chapters include production tables and industry structure tables, information about Government policies and programs that affect the country's mineral industry, and an outlook section.

A new breed of powerhouse companies from the emerging markets is catching their Western competitors off-guard. Household names of today - IBM, Ford, Wal-Mart - are in danger of becoming has-beens as these more innovative superstars rise to dominance, representing both an urgent competitive challenge and an unprecedented investment and business opportunity. Understanding how they have become world-class market leaders - and where they are going next - is crucial to an understanding of the future of globalization. Training his brilliant investor's eye on the top twenty-five of these emerging market companies, visionary international investment analyst Antoine van Agtmael takes readers into the boardroom suites and labs where they are outmanoeuvring their Western competitors. He reveals how these companies have made it to the top of the global heap, profiling major players such as China's Haier appliance manufacturer; Korea's Samsung; Brazil's Embraer jet maker; and India's Infosys. Divulging their strategies for future growth, he analyses how their rise to prominence will change our lives. His unique insights reveal both how we in the West can capitalize on the opportunities these companies represent while also mobilizing a powerful response to the challenges they present.

Volume 38 of the Chinese (Taiwan) Yearbook of International Law and Affairs publishes scholarly articles and essays on international and transnational law, as well as compiles official documents on the state practice of the Republic of China (Taiwan) in 2020.

With reference to India.

This book provides one of the most comprehensive and compelling analysis of Non-Market Economies (NMEs) and their treatment under the current world trading system. In particular, it ex-

amines the treatment of China as an NME in anti-dumping investigations, especially post-December 2016. Central to this analysis is Section 15 of China's Protocol of Accession to the WTO, which is the focal point of the controversy between China and other major WTO Members. The book highlights multiple perspectives on the interpretation of Section 15 and the Second Ad Note to Article VI of the General Agreement on Tariffs and Trade (GATT), which form the legal basis for China's special treatment in anti-dumping proceedings, and provides unique approaches on interpreting the above treaty texts. In addition, the book explores recourses to trade remedy instruments other than anti-dumping to identify and address state-driven market distortions in the case of NMEs. Authored by leading practitioners and scholars, the chapters offer a detailed commentary and rich insights into the diverse approaches and methods used by anti-dumping investigation agencies of leading users. This book serves as an all-inclusive resource for discerning all facets of this issue, magnitude of the consequences, and potential threats to the delicate trading system. It is of particular relevance to economies-in-transition and newly acceding countries to the WTO. This book generates special interest among legal practitioners, exporters, trading firms, think tanks, academicians, policy makers and the entire community engaged in international trade disputes with China.

Is 'backwardness' a disadvantage? Alexander Gerschenkron developed a model of economic development in which less-developed countries are not necessarily at a disadvantage to more advanced countries. The application of new strategies and the emergence of new institutions could systematically compensate for inadequate supplies of capital, skilled labour, entrepreneurship and technology found in the more advanced economies. With this in mind, *The Economics of the Latecomers* attempts to explicate the 'catching-up' process of the most spectacularly successful economies of East Asia, Japan and South Korea. Combining insights from economic history, development economics and the economics of technology, the book emphasises the need for historical models to understand historical processes. This perspective enables the author to demonstrate the limitations of neo-Schumpeterian approaches and the New Institutional Economics as means of analysing the development process.

This edition of the U.S. Geological Survey (USGS) Minerals Yearbook discusses the performance of the worldwide minerals and materials industries during year 2013 and provides background information to assist in interpreting that performance. These annual reviews are designed to provide timely statistical data on mineral commodities in various countries. This volume covers data from Asia and the Pacific. Each report includes sections on government policies and programs, environmental issues, trade and production data, industry structure and ownership, commodity sector developments,

infrastructure, and a summary outlook. Audience: Government employees and contractors, as well as businesses and employees, all working in mineral-related trades, especially with interests in statistics about mineral commodities overseas, will find this resource invaluable. Check out our Minerals & Metals publications here: <https://bookstore.gpo.gov/catalog/science-technology/minerals-metals> Other print volumes in the Minerals Yearbook series are available here: <https://bookstore.gpo.gov/catalog/science-technology/minerals-metals/minerals-yearbook>

This book explores the principles of supply-side structural reform and current practices in the Chinese steel industry. Focusing on the general requirements for high-quality development, it reviews the evolution of the global and Chinese steel industries with regard to reduction, innovation, and transformation. It also summarizes industrial development law from a transfer route perspective, analyzes major challenges and opportunities for the steel industry in the new era, and proposes strategic orientation and implementation measures for the future development of the steel industry. The book contends that high-quality development of the steel industry must be driven by innovation, and it is essential to promote integrated development based on several aspects - greenness, coordination, quality, standardization, differentiation, service, intelligence, diversification, and internationalization - in order to reshape the industrial value chain and continuously improve industrial competitiveness. This concept is essential to help Chinese steel companies prepare development plans for transformation and upgrading. Combining thorough analysis, unique insights, and many practical cases, the book offers a guide to and inspiration for future implementation approaches.

The POSCO Strategy brings to life one of the world's great industrial success stories. Expertly told by William T. Hogan, an accomplished commentator on the global steel industry, the work traces the

meteoric rise of South Korea's Pohang Iron and Steel Company and the incredible impact it has had on this small agrarian country. In a mere quarter of a century POSCO has grown to become the largest steel company in the world and has dragged South Korea into the industrial age. The book not only provides a blueprint for the world's steel industry but offers an incredible case study to students of modern Asian economic history seeking to understand how a non-industrialized economy can be so dramatically modernized by the development of a single industry.

South Korea has been quietly growing into a major economic force, even challenging Japan in some industries. This growth may be seen as an example of "late industrialization" and this book discusses this point.

There are competing theories to explain the reasons behind the international competitiveness of manufacturing in Asia. Analysing these different theories will bring important lessons, not just for Asia, but for developing economies the world over. This lucid book studies industries and firms in East Asia and examines the major determinants of their economic performance. With contributions from such leading thinkers as Ha-Joon Chang and Rajah Rasiah, the book covers such themes as: \*industrial policy and East Asia \*Taiwan's information technology industry \*The role of the government in technological capability building Manufacturing Competitiveness in Asia touches on many important themes and issues and as such will be of great interest to students, academics and policy-makers involved in industrial economics, international trade and Asian studies.

This title seeks to understand what a successful country like South Korea does after it has attained 'development' and economic maturity. It looks at Korea and Asian regionalism; Korean business and innovation strategies in Asia; and Asian migration and immigrants in Korea.
