What are the most fundamental differences among the political economies of the developed world? How do national institutional differences condition economic performance, public policy, and social well-being? Will they survive the pressures for convergence generated by globalization and technological change? These have long been central questions in comparative political economy. This book provides a new and coherent set of answers to them. Building on the new economics of organization, the authors develop an important new theory about which differences among national political economies are most significant for economic policy and performance. Drawing on a distinction between 'liberal' and 'coordinated' market economies, they argue that there is more than one path to economic success. Nations need not converge to a single Anglo-American model. They develop a new theory of 'comparative institutionaladvantage' that transforms our understanding of in-

ternational trade, offers new explanations for the response of firms and nations to the challenges of globalization, and provides a new theory of national interest to explain the conduct of nations in international relations. The analysis brings the firm back into the centre of comparative political economy. It provides new perspectives on economic and social policy-making that illuminate the role of business in the development of the welfare state and the dilemmas facing those who make economic policy in the contemporary world. Emphasizing the 'institutional complementarities' that link labour relations, corporate finance, and national legal systems, the authors bring interdisciplinary perspectives to bear on issues of strategic management, economic performance, and institutional change. This pathbreaking work sets new agendas in the study of comparative political economy. As such, it will be of value to academics and graduate students in economics, business, and political science, as well as to many others with interests in international relations, social policy--making, and the law.

This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

Tracing the treatment of language in international business as represented in the Journal of International Business Studies, this seminal collection critically explores the conceptualizations of language that have been adopted or ignored by international business scholars over the years and showcases nine articles that have played an important role in establishing and advancing the field. In today's increasingly globalized context of business, significantly richer theories from interdiscipli-

nary perspectives are needed to explain the complexity of the interplay between multiple facets of language and how they affect day-to-day operations. With insights from linguistics, psychology and organizational theory, Language in International Business provides an assessment of scholarly efforts to uncover the profound impact that language has on global business today and proposes some important ways in which this nascent field of language in international business may be further advanced. Dedicated to Professor Peter Buckley, OBE, this volume of Progress in International Business Research explores the new challenges for MNEs, SMEs (small and medium sized enterprises) and IN-Vs (International New Ventures) emerging from this changing and increasingly unpredictable political, economic, social and technological VUCA world.

This book is open access under a CC BY-NC-ND 4.0 license. Multinational corporations (MNCs) have long played a crucial role in the Chinese economy. This role is one that is set to continue in the post-pandemic era as China works to transit to a high-quality growth model that is more sustainable and innovation-driven. With global experience and front-line involvement in some of the most pressing economic, technological, and environmental issues of our day, leading figures in MNCs and chambers of commerce are well placed to share insights that could potentially contribute to policymaking and development strategies so that everyone can "make the most" of China's future. This collection of essay aims to share these invaluable insights with a wider audience, offering balanced and diverse perspectives from companies and advocacy groups working on a range of issues related to China's domestic development, international economic cooperation, and China-US competition. These insights are useful not only for the wider business community, but also for academics, policymakers, students, and anyone trying to deepen their understanding of this exciting period of "transition and opportunity," and make the most of China's bright future.

This volume collects research papers addressing topical issues in economics and management with a particular focus on dynamic models which allow to analyze and foster the decision making of firms in dynamic complex environments. The scope of the contributions ranges from daily operational challenges firms face to strategic choices in dynamic industry environments and the analysis of optimal growth paths. The volume also highlights recent methodological developments in the areas of dynamic optimization, dynamic games and meta-heuristics, which help to improve our understanding of (optimal) decision making in a fast evolving economy.

The study of Law forms a component of many undergraduate and postgraduate programs. Its inclusion does not aim to equip business practitioners with skill and expertise to render professional legal advice unnecessary, but more to provide a legal framework of reference in which both strategic and more immediate business issues can be placed. Equipping managers with a basic understanding of how law impacts upon business activity can help them avoid legal pitfalls in the first place or at least identify potential problems at an early stage, to avoid inconvenience and cost. International business can present problems that are not present in a purely domestic transaction. Any law component in a management program should embrace it and by doing so the business practitioner can be familiarized with the wider picture in which modern business, aided by technological development, is increasingly practiced.

For courses on Business Intelligence or Decision Support Systems. A managerial approach to understanding business intelligence systems. To help future managers use and understand analytics, Business Intelligence provides students with a solid foundation of BI that is reinforced with hands-on practice.

With the rise of China in the world economy, investors from all over the world are moving to explore business opportunities in this market. Managing international business in a transition economy like China is a daunting challenge. Tian presents a practical guide to major managerial issues

faced by foreign investors in the China market including strategic management of Guanxi, entry mode selection, alliance management, negotiation with Chinese partners, human resource management, marketing management, protection of intellectual property rights, and corporate financial management. These issues are analyzed in the light of relevant theoretical models of international business, with reference to current management practices of transnational corporations operating in China. With up-to-date case studies, questions for discussion and recommended readings at the end of each chapter, this book can be used as a textbook for postgraduate programmes in international business or other management disciplines, and as a textbook for executive training programmes.

This textbook explores the theoretical and practical aspects of managing international business operations while also dealing with multi-cultural, multi-national and global issues of managing business expansion beyond the domestic market.
