Introduction to Computer Computer A computer is an electronic device, operating under the control of instructions stored in its own memory that can accept data (input), process the data according to specified rules, produce information (output), and store the information for future use.

Introduction to CSiBridge Completely integrated within the CSiBridge design package is the power of the SAPFire analysis engine, including staged construction, creep and shrinkage analysis, cable tensioning to target forces, camber and shape finding, geometric nonlinearity (P-delta and large displacements), material nonlinearity (super-

In this unit, basic terms that relate to computer science and computing are described. Unit 1: General Introduction to Computer Systems . In this unit, basic terms such as Hardware, Software, and the Internet are defined. It discusses . History and evolution of Computer Systems, as well as Types and classes of Computer Systems.

Introduction to CSiBridge Bridge spans are defined. Deck section properties are assigned to each span. Parametric deck section variations may be assigned to each span. Abutments, including their skews, are assigned at each end of the bridge. Bents, including their skews, are assigned at each bent location. Diaphragms, including their skews, may be assigned along each span. Hinges, including their skews, may be assigned along each span. Additional discretization points, including their skews ...

CSiBridge. Version: Model ID: na. Users must assign discrete hinges to frame elements in order to model nonlinear behavior in frame element. Merely defining a nonlinear material properties does not activate nonlinear material response of frame elements, unless hinges are assigned to the frame elements.
