Economics Definition: Economics is essentially a study of the usage of resources under specific constraints, all bound with an audacious hope that the subject under scrutiny is a rational entity which seeks to improve its overall well-being. Two branches

within the subject have evolved thus: microeconomics (individual choices) which deals with entities and the interaction between those entities, while macroeconomics (aggregate outcomes) deals with the entire economy as a whole.

Introduction to Macroeconomics TOPIC 4: The IS-LM Model. The IS-LM Model. In topic 2 The Goods Market, we isolated the goods market from the financial one by assuming that investment was not a function of the interest rate. In topic 3 The Financial Market, we studied the interest rate and how it is determined on the financial market.
