Learning disabilities are among the most common disabilities experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.

Romania has a larger Gypsy population than most other countries but little is known about the relationship between this group and the non-Gypsy Romanians around them. This book focuses on a group of Rom Gypsies living in a village in Transylvania and explores their social life and cosmology. Because Rom Gypsies are dependent on and define themselves in relation to the surrounding non-Gypsy populations, it is important to understand their day-to-day interactions with these neighbors, primarily peasants to whom they relate through extended barter. The author comes to the conclusion that, although economically and politically marginal, Rom Gypsies are central to Romanian collective identity in that they offer desirable and repulsive counter images, incorporating the uncivilized, immoral and destructive "other". This interdependence creates tensions but it also allows for some degree of cultural and political autonomy for the Roma within Romanian society.

This guideline provides updated global, evidence-informed recommendations on the intake of free sugars to reduce the risk of NCDs in adults and children, with a particular focus on the prevention and control of unhealthy weight gain and dental caries. The recommendations in this guideline can be used by policy-makers and programme managers to assess current intake levels of free sugars in their countries relative to a benchmark. They can also be used to develop measures to decrease intake of free sugars, where necessary, through a range of public health interventions. Examples of such interventions and measures that are already being implemented by countries include food and nutrition labelling, consumer education, regulation of marketing of food and non-alcoholic beverages that are high in free sugars, and fiscal policies targeting foods and beverages that are high in free sugars. This guideline should be used in conjunction with other nutrient guidelines and dietary goals, in particular those related to fats and fatty acids (including saturated fatty acids and trans-fatty acids), to guide development of effective public health nutrition policies and programmes to promote a healthy diet.
