Despite advances in modeling, such as graphical user interfaces, the use of GIS layers, and databases for developing input files, the approaches to modeling phosphorus (P) have not changed since their initial development in the 1980s. Current understanding of P processes has evolved and this new information needs to be incorporated into the current models. Filling this need, Modeling Phosphorus in the Environment describes basic approaches to modeling P, how the current models implement these approaches, and ways to improve them. The book sets the scene with a review of general approaches to modeling runoff and erosion, P in runoff, leaching of P, stream processes that affect P, and an examination of the important issue of model uncertainty. It describes state-of-the-science watershed-scale P transport models including dynamic semi-disturbed models, models of intermediate complexity, and two lumped models. Phosphorus Indexes (PIs) represent one end of the modeling spectrum and the book takes a comprehensive look at PIs developed in each state, and illustrates some of the problems encountered when incorporating PIs into farm-scale manure management software. The book discusses monitoring data, which is critical for calibrating models, and concludes with suggestions for improving the modeling of P. From researching mechanisms to applying regulations, the uses of phosphorus models have increased as our knowledge of the effects of phosphorus in the environment has increased. Drawing on contributions from experts, the book gives you the tools to select the model that best fits your needs.

Workshops on the mechanisms of B cell neoplasia have been organized alternatively in Bethesda and Basel since 1983. Progress in our understanding of the development and responses of B lymphocytes is presented and discussed with the aim and hope to understand what might go wrong when B lymphocytes are transformed into malignant cells. Such knowledge might lead to better diagnosis, prevention and even cure of these terrible diseases. The presentations at the Bethesda workshops are published as papers in volumes of Current Topics in Microbiology and Immunology, while

the presentations and discussions in Basel were transcribed and published in Editions Roche. For the first time, a Basel workshop (held 4th-6th October 1998) that has been recorded and, in part, transcribed is being published as papers and discussions within Current Topics. This volume is the latest of a long series which documents the excitements of ground-breaking discoveries as well as the frustrations of our inability to fully understand the mechanisms leading to B cell neoplasia. The papers at the workshop are presented when possible in the sequence in which they were given. However, to facilitate the organization and reading of the book and to highlight general topics and themes, the papers are organized into five sections: I B Cell and Plasma Cell Development II Chemokines and Chemokine Receptors III Chromosomal Translocations, DNA Rearrangements and Somatic Hypermutations IV Biology of Lymphomagenesis, B-CLL, Autoimmunity V Myeloma, Plasmacytomas and Related Subjects.

This book provides an overview of historical and contemporary cases of homicidal poisoning. While homicidal poisoning is sometimes thought of as a thing of the past, it continues to be a contemporary problem, and in fact the unknown offender rate for poisoning cases is 20-30 times that of other homicide types in contemporary research, and many poisoners commit serial homicides while going undetected. The author of this important and timely work explores the theoretical bases for understanding homicidal poisoning, the nature of poisons used in homicidal cases, the characteristics of poisoners and their victims, and techniques for detection and prevention. This unique book will be of particular interest to: students of criminology (classes dealing with criminal psychology, and murder investigation); students of the history of crime; criminal justice professionals: attorneys, homicide detectives, forensic pathologists, forensic and clinical toxicologists, and other forensic investigators; and all interested in poisons, poisoners and the detection of poisoning. It has relevance to criminology, law and policing, toxicology and forensic science, the history of crime and detection, and criminal psychology. Endorsements: "A most welcomed addition to the important subject of the criminal poisoner. The author has done a fantastic job of researching the world literature, and distilling it down for the reader. The work is very well referenced, and provides critical information for law enforcement, forensic pathologists, and others, that could be dealing with the criminal poisoner." John H. Trestrail III Toxicologist Los Lunas, New Mexico USA "Dr Michael Farrell has produced a comprehensive and authoritative work on a most serious but often overlooked aspect of criminal assault - the act of poisoning. In the Criminology of Homicidal Poisoning, Farrell seamlessly weaves together the facts about poisons and their use as an instrument of homicide with the context of the larger issue of murder. By examining the poisoner and the victim, the reader is provided a depth of understanding about how a deadly outcome arose and why the choice was made to employ poison to get the grisly job done. With criminal homicide by poisoning making up a small percentage of known crimes, the danger of insufficient scholarly attention is present. Dr Michael Farrell makes a significant contribution to ensure against this potential. As a homicide researcher, I know Criminology of Homicidal Poisoning will join the works I turn to in understanding the nuances of the how and why of homicide." Dr Richard M. Hough, Sr., Criminology and Criminal Justice and Public Administration Program Coordinator

dinator, University of West Florida, US "This comprehensive text links forensic toxicology with criminology, making a solid contribution to both fields. Farrell not only describes how homicidal poisoning fits the most popular criminological theories for why people kill but also examines the nature and lethality of various poisons, identifies trends in poisoning, provides a history, and shows offender traits and victim characteristics. In addition, he discusses issues for investigators and prosecutors who will be taking a poisoning case to trial."
