This text is intended for use in the Java programming course Tony Gaddis's accessible, step-by-step presentation helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the Java programming language by presenting all the details needed to understand the "how" and the "why"—but never losing sight of the fact that most beginners struggle with this material. His approach is both gradual and highly accessible, ensuring that students understand the logic behind developing high-quality programs. In *Starting Out with Java: Early Objects*, Gaddis looks at objects—the fundamentals of classes and methods—before covering procedural programming. As with all Gaddis texts, clear and easy-to-read code listings, concise and practical real-world examples, and an abundance of exercises appear in every chapter. Teaching and Learning Experience This program presents a better teaching and learning experience—for you and your students. Enhance Learning with the Gaddis Approach: Gaddis's accessible approach features clear and easy-to-read code listings, concise real-world examples, and exercises in every chapter. Keep Your Course Current: Content is refreshed to provide the most up-to-date information on new technologies for your course. Support Instructors and Students: Student and instructor resources are available to expand on the topics presented in the text.

This Compendium gives an outline of the historical, philosophical and ethical aspects of the return of cultural objects (e.g. cultural objects displaced during war or in colonial contexts), cites past and present cases (Maya Temple Facade, Nigerian Bronzes, United States of America v. Schultz, Parthenon Marbles and many more) and analyses legal issues (bona fide, relevant UNESCO and UNIDROIT Conventions, Supreme Court Decisions, procedure for requests etc.). It is a landmark publication that

bears testament to the ways in which peoples have lost their entire cultural heritage and analyses the issue of its return and restitution by providing a wide range of perspectives on this subject. Essential reading for students, specialists, scholars and decision-makers as well as those interested in these topics.

Focuses on the heartland of the Nahdlatul Ulama (NU), the largest Islamic organization in Indonesia, and on the role of ulama (religious leaders), or kiai as they are known in Java, within NU. Based on substantial fieldwork, this study provides an informed glimpse into the intimate relationships among kiai, their role in local and national politics and their leadership of the Islamic community. Argues that the charismatic authority exerted through the leadership of the kiai in Java has limitations in terms of its legitimacy. At the very least it has boundaries that determine areas or circumstances for its legitimate expression. It also argues that the kiai's influence in politics is not as strong as in other domains.

This newly expanded and updated second edition of the best-selling classic continues to take the "mystery" out of designing algorithms, and analyzing their efficacy and efficiency. Expanding on the first edition, the book now serves as the primary textbook of choice for algorithm design courses while maintaining its status as the premier practical reference guide to algorithms for programmers, researchers, and students. The reader-friendly Algorithm Design Manual provides straightforward access to combinatorial algorithms technology, stressing design over analysis. The first part, Techniques, provides accessible instruction on methods for designing and analyzing computer algorithms. The second part, Resources, is intended for browsing and reference, and comprises the catalog of algorithmic resources, implementations and an extensive bibliography. NEW to the second edition: • Doubles the tutorial material and exercises over the first edition • Provides full online support for lecturers, and a completely updated and improved website component with lecture slides, audio and video • Contains a unique catalog identifying the 75 algorithmic problems that arise most often in practice, leading the reader down the right path to solve them • Includes several NEW "war stories" relating experiences from real-world applications • Provides up-to-date links leading to the very best algorithm implementations available in C, C++, and Java

This book (also available online at www.designgurus.org) by Design Gurus has helped 60k+ readers to crack their system design interview (SDI). System design questions have become a standard part of the software engineering interview process. These interviews determine your ability to work with complex systems and the position and salary you will be offered by the interviewing company. Unfortunately, SDI is difficult for most engineers, partly because they lack experience developing large-scale systems and partly because SDIs are unstructured in nature. Even engineers who've some experience building such systems aren't comfortable with these interviews, mainly due to the open-ended nature of design problems that don't have a standard answer. This book is a comprehensive guide to master SDIs. It was created by hiring managers who have worked for Google, Facebook, Microsoft, and Amazon. The book contains a carefully chosen set of questions that have been repeatedly asked at top companies. What's inside? This book is divided into two parts. The first part includes a step-by-step guide on how to answer a system design question in an interview, followed by famous system design case studies. The second part of the book includes a glossary of system design concepts. Table of Contents First Part: System Design Interviews: A step-by-step guide. Designing a URL

This proceeding contains selected papers of The International Seminar On Recent Language, Literature, And Local Culture Studies "Kajian Mutakhir Bahasa, Sastra, Dan Budaya Daerah (BASA)" held on 20-21 September 2019 in Solo, Indonesia. The conference which was organized by Sastra Daerah, Faculty of Cultural Sciences Universitas Sebelas Maret and Culture Studies Postgraduate Program of Universitas Sebelas Maret. The conference accommodates topics for linguistics in general including issues in language, literature, local cultural studies, philology, folklore, oral literature, history, art, education, etc. Selecting and reviewing process for the The International Seminar On Recent Language, Literature, And Local Culture Studies "Kajian Mutakhir Bahasa, Sastra, dan Budaya Daerah" was very challenging in that it needs a goodwill of those who were involved in such a process. More than ten experts were invited in reviewing, giving suggestions for revision and at last selecting the papers. On that account, we would like to forward our appreciation and our gratefulness to such invited experts for having done the process. The committee received more than 180 papers from the participants and based on the results of the review, only 141 papers were declared fit to be presented at the seminar and subsequently published in the proceedings of BASA#3-2019 Papers in the proceeding are expected to give academic benefits, especially in broadening the horizon of our understanding in language, literature, and local culture studies. We realize that what we are presenting for the publication is till far for being perfect. Constructive criticism is very much welcome for improvement. Finally, the committees thank for the participation and congratulate for the publication of the papers in the proceedings of BASA#3-2019. The committees also thank all those who have supported and actively participated for the success of this event. Hopefully these Proceedings can be used as references in developing technology and improving learning activities in the fields of education, social, arts and humanities.

Late in 1940, the young men of the 2nd Battalion, 131st Field Artillery Regiment stepped off the trucks at Camp Bowie in Brownwood, Texas, ready to complete the training they would need for active duty in World War II. Many of them had grown up together in Jacksboro, Texas, and almost all of them were eager to face any challenge. Just over a year later, these carefree young Texans would be confronted by horrors they could never have imagined. The battalion was en route to bolster the Allied defense of the Philippines when they received news of the Japanese bombing of Pearl Harbor. Soon, they found themselves ashore on Java, with orders to assist the Dutch, British, and Australian defense of the island against imminent Japanese invasion. When war came to Java in March 1942, the Japanese forces overwhelmed the numerically inferior Allied defenders in little more than a week. For more than three years, the Texans, along with the sailors and marines who survived the sinking of the USS Houston, were prisoners of the Imperial Japanese Army. Beginning in late 1942, these prisoners-of-war were shipped to Burma to accelerate completion of the Burma-Thailand railway. These men labored alongside other Allied prisoners and Asian conscript laborers to build more than 260 miles of railroad for their Japanese taskmasters. They suffered abscessed wounds, near-starvation, daily beatings, and debilitating disease, and 89 of the original 534 Texans taken prisoner died in the infested, malarial jungles. The survivors received a hero's welcome from Gov. Coke Stevenson, who declared October 29, 1945, as "Lost Battalion Day" when they finally returned to Texas. Kelly E. Crager consulted official documentary sources of the National Archives and the U.S. Army and mined the personal memoirs and oral history interviews of the "Lost Battalion" members. He fo-

cuses on the treatment the men received in their captivity and surmises that a main factor in the battalion's comparatively high survival rate (84 percent of the 2nd Battalion) was the comradery of the Texans and their commitment to care for each other. This narrative is grueling, yet ultimately inspiring. *Hell under the Rising Sun* will be a valuable addition to the collections of World War II historians and interested general readers alike.

This tutorial book features an augmented selection of the material presented at the GI-Dagstuhl Research Seminar on Human-Centered Visualization Environments, HCVE 2006, held in Dagstuhl Castle, Germany in March 2006. It presents eight tutorial lectures that are the thoroughly cross-reviewed and revised versions of the summaries and findings presented and discussed at the seminar. *Make cool stuff*. If you're a designer or artist without a lot of programming experience, this book will teach you to work with 2D and 3D graphics, sound, physical interaction, and electronic circuitry to create all sorts of interesting and compelling experiences -- online and off. *Programming Interactivity* explains programming and electrical engineering basics, and introduces three freely available tools created specifically for artists and designers: Processing, a Java-based programming language and environment for building projects on the desktop, Web, or mobile phones Arduino, a system that integrates a microcomputer prototyping board, IDE, and programming language for creating your own hardware and controls OpenFrameworks, a coding framework simplified for designers and artists, using the powerful C++ programming language BTW, you don't have to wait until you finish the book to actually make something. You'll get working code samples you can use right away, along with the background and technical information you need to design, program, build, and troubleshoot your own projects. The cutting edge design techniques and discussions with leading artists and designers will give you the tools and inspiration to let your imagination take flight.

This book is about coding interview questions from software and Internet companies. It covers five key factors which determine performance of candidates: (1) the basics of programming languages, data structures and algorithms, (2) approaches to writing code with high quality, (3) tips to solve difficult problems, (4) methods to optimize code, (5) soft skills required in interviews. The basics of languages, algorithms and data structures are discussed as well as questions that explore how to write robust solutions after breaking down problems into manageable pieces. It also includes examples to focus on modeling and creative problem solving. Interview questions from the most popular companies in the IT industry are taken as examples to illustrate the five factors above. Besides solutions, it contains detailed analysis, how interviewers evaluate solutions, as well as why they like or dislike them. The author makes clever use of the fact that interviewees will have limited time to program meaningful solutions which in turn, limits the options an interviewer has. So the author covers those bases. Readers will improve their interview performance after reading this book. It will be beneficial for them even after they get offers, because its topics, such as approaches to analyzing difficult problems, writing robust code and optimizing, are all essential for high-performing coders.

Kyai Haji Abdullah Gymnastiar, known affectionately by Indonesians as "Aa Gym" (elder brother Gym), rose to fame via nationally televised sermons, best-selling books, and corporate training seminars. In *Rebranding Islam* James B. Hoesterey draws on two years' study of this charismatic leader and his message of Sufi ideas blended with Western pop psychology and management theory to examine new trends in the religious and economic desires of an aspiring middle class, the political predicaments bridging self and state, and the broader themes of religious authority, economic globalization, and the end(s) of political Islam. At Gymnastiar's Islamic school, television studios, and MQ Training complex, Hoesterey observed this charismatic preacher developing a training regimen called *Manajemen Qolbu* into Indonesia's leading self-help program via nationally televised sermons, best-selling books, and corporate training seminars. Hoesterey's analysis explains how Gymnastiar articulated and mobilized Islamic idioms of ethics and affect as a way to offer self-help solutions for Indonesia's moral, economic, and political problems. Hoesterey then shows how, after Aa Gym's fall, the former celebrity guru was eclipsed by other television preachers in what is the ever-changing mosaic of Islam in Indonesia. Although *Rebranding Islam* tells the story of one man, it is also an anthropology of Islamic psychology.

There are many distinct pleasures associated with computer programming. Craftsmanship has its quiet rewards, the satisfaction that comes from building a useful object and making it work. Excitement arrives with the flash of insight that cracks a previously intractable problem. The spiritual quest for elegance can turn the hacker into an artist. There are pleasures in parsimony, in squeezing the last drop of performance out of clever algorithms and tight coding. The games, puzzles, and challenges of problems from international programming competitions are a great way to experience these pleasures while improving your algorithmic and coding skills. This book contains over 100 problems that have appeared in previous programming contests, along with discussions of the theory and ideas necessary to attack them. Instant online grading for all of these problems is available from two WWW robot judging sites. Combining this book with a judge gives an exciting new way to challenge and improve your programming skills. This book can be used for self-study, for teaching in-

novative courses in algorithms and programming, and in training for international competition. The problems in this book have been selected from over 1,000 programming problems at the Universidad de Valladolid online judge. The judge has ruled on well over one million submissions from 27,000 registered users around the world to date. We have taken only the best of the best, the most fun, exciting, and interesting problems available.

"Music of the Baduy People of Western Java: Singing is a Medicine by Wim van Zanten is about music and dance of the indigenous group of the Baduy, consisting of about twelve-thousand people liv-

ing in western Java. It covers music for rice rituals, for circumcisions and weddings, and music for entertainment. The book includes many photographs and several discussed audio-visual examples that can be found on figshare.com. Baduy should live a simple, ascetic life. However, there is a shortage of agricultural land and there are many temptations from the changing world around them. Little has been published on Baduy music and dance. Wim van Zanten's book seeks to fill this lacuna and is based on short periods of fieldwork from 1976 to 2016"--
