Grades of Jet Fuel. Jet A, which is the fuel that was widely used in Europe after World War II, is almost identical to kerosene. Its widespread use on the continent was due to the fact that it was more available than gasoline. Another grade in common use is Jet A-1. Together, these are the fuels used more commonly by commercial airliners. Jet B ...

Ammonia can officially work as jet fuel, according to a new study. And it doesn't require an extreme aircraft redesign—just a better propulsion system.

#### The Differences Between AvGas, Jet Fuel, Auto Fuel, and ...

Virtually all jet fuel produced in China is now RP-3 (renamed No 3 Jet Fuel). International Specifications - AFQRJOS Checklist As jet fuel supply arrangements have become more complex, involving comingling of product in joint storage facilities, a number of fuel suppliers developed a document which became known as the Aviation Fuel Quality Requirements for Jointly Operated Systems, or AFQRJOS ...

Aviation fuels are petroleum-based fuels, or petroleum and synthetic fuel blends, used to power aircraft. They have more stringent requirements than fuels used for ground use, such as heating and road transport, and contain additives to enhance or maintain properties important to fuel performance or handling. They are kerosene-based (JP-8 and Jet A-1) for gas turbine-powered aircraft.
