Interventions and Policies to Enhance Wellbeing Wellbeing: A Complete Reference Guide is the first multivolume, interdisciplinary exploration of the topic of wellbeing. The notion of wellbeing has grown in importance and prominence across the globe in recent years and this reference work provides an in-depth examination of the characteristics that enable individuals and organizations to thrive and flourish. Under the direction of noted academic Cary Cooper, and edited by a distinguished group of senior scholars from a variety of disciplines, this project looks at wellbeing from multiple perspectives, including children and families; the environment; the workplace; later life; economics; and interventions and public policy. Spanning the social sciences and encompassing the latest research, this is an essential reference for scholars, students, professionals, and policy makers who want to enhance and promote human wellbeing. Interventions and Policies to Enhance Wellbeing looks at the most successful existing strategies to promote wellbeing and mental health. It examines the latest research in the science of wellbeing and discusses the practical implications for improved learning, creativity, productivity, relationships, and health. The first two sections cover interventions for individuals across the lifespan, as well as those for organizations and communities. The final section looks specifically at policy initiatives and approaches, with a focus on the integration of new technology and the role of the media. In this multidisciplinary volume, a cadre of global scholars considers a wealth of new research and outlines the potential impact on future policy and the wellbeing of society at large. Over the past decade high performance computing has demonstrated the ability to model and predict accurately a wide range of physical properties and phenomena. Many of these have had an important impact in contributing to wealth creation and improving the quality of life through the development of new products and processes with greater efficacy, efficiency or reduced harmful side effects, and in contributing to our ability to understand and describe the world around us. Following a survey of the U.K.'s ur-

gent need for a supercomputing facility for academic research (see next chapter), a 256-processor T3D system from Cray Research Inc. went into operation at the University of Edinburgh in the summer of 1994. The High Performance Computing Initiative, HPCI, was established in November 1994 to support and ensure the efficient and effective exploitation of the T3D (and future generations of HPC systems) by a number of consortia working in the "frontier" areas of computational research. The Cray T3D, now comprising 512 processors and total of 32 GB memory, represented a very significant increase in computing power, allowing simulations to move forward on a number of fronts. The three-fold aims of the HPCI may be summarised as follows; (1) to seek and maintain a world class position in computational science and engineering, (2) to support and promote exploitation of HPC in industry, commerce and business, and (3) to support education and training in HPC and its application.
