If the 400 had less snap at 70 to get to 75 a single tooth or 2 more of rear sprocket would likely equalize them. The 450/520 were basically the same on the street. My thinking with a DS/enduro 4t is to get the biggest one I can, like my previous 620, 520, 525, 610 and now 530 and 570s. They all weigh the same with the RFS anyway.
