A Therapist's Guide to Child Development gives therapists and counselors the basics they need to understand their clients in the context of development and to explain development to parents. The chapters take the reader through the various physical, social, and identity developments occurring at each age, explaining how each stage of development is closely linked to mental health and how that is revealed in therapy. This ideal guide for students, as well as early and experienced professionals, will also give readers the tools to communicate successfully with the child's guardians or teachers, including easy-to-read handouts that detail what kind of behaviors are not cause for concern and which behaviors mean it's time to seek help. As an aid to practitioners, this book matches developmental ages with appropriate, evidence-based mental health interventions.

Recent decades have seen a growing emphasis, in a number of professional contexts, on acknowledging and acting on the views of children. This trend was given added weight by the UN Convention on the Rights of the Child, ratified in 1990. Today, seeking the perspective of the child has become an essential process in all sorts of tasks, from framing new legislation to regulating professions. This book answers the fundamental question of what it is that constitutes a 'child perspective', and how this might differ from the perspectives of children themselves. The answers to such questions have important implications for building progressive and developmental adult-child relationships. However, theoretical and empirical treatments of child perspectives and children's perspectives are very diverse and idiosyncratic, and the standard reference work has yet to be written. Thus, this work is an attempt to fill the gap in the literature by searching for and defining key formulations of potential child perspectives within parts of the so-called 'new child paradigm'. This has been de-

rived from childhood sociology, contextual-relational developmental psychology, interpretative humanistic psychology and developmental pedagogy. The highly experienced authors develop a comprehensive professional child perspective paradigm that integrates recent theory and empirical child research. With its clear presentation of underlying theories and suggested applications, this book illustrates a child-oriented understanding of specific relevance to both child-care and preschool educational practice.

The development of children is one of the most fascinating wonders of life. From the moment conception takes place until the end of adolescence when the person enters the adult world, the developmental road is characterised by numerous miracles and mysteries. In this book, the authors are sharing their training and experience in the field of child psychology, not only as a clinical and counselling psychologist respectively, but also as the proud parents of two children, a grandson and a granddaughter. The target audience of this book is primarily undergraduate students in psychology, education, social work, psychiatry and related disciplines. The nature and extent of Child and Adolescent Development, however, also makes it suitable for use on the postgraduate level (especially where this field was not a focus area in the undergraduate course). Furthermore, the book contains valuable information which will be of interest to anyone who has an interest in child and adolescent development. Child psychology tells you more about your own and your children's development. In the process, you also acquire a better understanding of other people. However, to be interesting only does not justify the existence of a science. Therefore, it is important to know what the scientific contribution of child psychology is; that is, why we study and research this interesting field. The goals of child psychology are in line with the goals of general psychology:

- To describe the changes typ-

ically occurring from conception to about 18 years of age. For example: How does the unborn child develop in his or her mother's womb? How do 2-, 7-, 12- and 16-year-olds differ? How does sexuality develop during puberty and adolescence? • To explain what causes these developmental changes. Which factors could influence the prenatal development of the baby? Which factors could influence a delay in a child's language or cognitive development? How does peer pressure and bullying affect a child's self-image? • To predict, based on past and present characteristics, what behaviour the child will manifest at a later stage in his or her life. For example: What is the effect of alcohol and smoking on the unborn child? If a baby starts walking at an early age, does it mean that he or she is likely to become a good athlete? Will the aggressive infant turn into an aggressive teenager? Will the curious child develop into a scientist?

PLAY. We all do it: wordplay, love play, role-play; we play cards, play sport, play the fool, and play around. And that's just the grown-ups! It features in every aspect of our lives, whether we call it by that or another name. We all do it, but why do we do it? What does it mean to play and what, if any, difference does it make to our lives? Most crucially, and central to the theme of this book, is the question, 'Does play have a positive impact on our health and wellbeing, and consequently a role in modern healthcare delivery?' The contributors to this book provide a comprehensive overview of how play and play-based activities can be used throughout the adult lifespan to promote health and wellbeing within the context of healthcare service delivery for patients, their families and communities, and for the staff involved in their care. Responding to current global health concerns such as obesity, coronary heart disease, dementia and mental health, the book argues that play and playfulness offer a means of protection, promotion and recovery of positive health and wellbeing.

The human tendency for play and playfulness as essential to personal growth and development lie at the heart of the discussion. This book will be of interest to all those working in health or social care settings, including nursing, social work and allied health students and professionals and those working within the therapeutic disciplines of art therapy, music therapy, and recreation alliances.

Heroism in the Pursuit of Happiness: Power and Love Through Life's Peaks and Pits is a celebration of an all-surpassing divine love that redeems our hybrid mix of good and evil, wisdom and foolishness. The idea of hybrids is to get the best and minimize the worst of any two fruits, veggies, cars and so on. The hybrid car can be battery-run when we run out of gas. We human hybrids "run the good race" until we run out of will power and must find the reserve battery of our "higher power". We need spiritual heroes like St. Paul to reveal our human hybrid mix of foolishness and wisdom, weakness and strength. Paul had a strong will "to fight the good fight" against evil but was shocked to discover his moral weakness. "What I should do, I do not do. What I should not do, I do." Who can save us when our will power falls short? How do we "let go and let God be God" as we move through the crises of our life span?

Research on home visiting shows that Early Head Start (EHS) home-based programs benefit from additional training and resources that streamline philosophy and content. In this essential guide, Walsh and Mortensen propose that alignment with Family Life Education's (FLE) strengths-based methodology results in greater consistency through a model of prevention, education, and collaboration with families. This text is the first to outline linkages between FLE and EHS home visiting. It explores a qualitative study of FLE integrated in a current EHS home-based program and application of FLE methodology to home visiting topics. This approach will influence professional practice and provide a foundation for developing evidence-based home visiting practices. Online content accompanies the text, with videos demonstrating the FLE approach in action and discussion questions to encourage engagement with and understanding of the core material. *Transforming Early Head Start Home Visiting: A Family Life Education Approach* is essential reading for upper-level undergraduate and masters students in family studies and early childhood education, as well as practitioners working with children and families.
