Modern urban land use theory, which forms the core of urban economics, is essentially a revival of von Thünen's theory (1826) of agricultural land use. Despite its monumental contribution to scientific thought, von Thünen's theory languished for more than a century without attracting the widespread attention of economists.

In my mind, a number of the chapters stood out as unique relative to other Urban Economics text books on the market. The chapter on congestion provides a very nice graphical presentation of the external costs from congestion, highway demand and optimal allocation of traffic.
