Do you know what the hardest thing for an Italian learner is? Finding PROPER reading material that they can handle...which is precisely the reason we've written this book! Teachers love giving out tough, expert-level literature to their students, books that present many new problems to the reader and force them to search for words in a dictionary every five minutes -- it's not entertaining, useful or motivating for the student at all, and many soon give up on learning at all! In this book we have compiled 20 easy-to-read, compelling and fun stories that will allow you to expand your vocabulary and give you the tools to improve your grasp of the wonderful Italian tongue. How Italian Short Stories for Beginners works: Each story will involve an important lesson of the tools in the Italian language (Verbs, Adjectives, Past Tense, Giving Directions, and more), involving an interesting and entertaining story with realistic dialogues and day-to-day situations. The summaries follow a synopsis in Italian and in English of what you just read, both to review the lesson and for you to see if you understood what the tale was about. At the end of those summaries, you'll be provided with a list of the most relevant vocabulary involved in the lesson, as well as slang and sayings that you may not have understood at first glance! Finally, you'll be provided with a set of tricky questions in Italian, providing you with the chance to prove that you learned something in the story. Don't worry if you don't know the answer to any -- we will provide them immediately after, but no cheating! So look no further! Pick up your copy of Italian Short Stories for Beginners and start learning Italian right now!

Baba Dunja is a Chernobyl returnee. Together with a motley bunch of former neighbours, they set off to create a new life for themselves in the radioactive no-man's land. Geiger counter and irradiated forest fruits be damned, there in that abandoned patch of Earth they have everything they need. Terminally ill Petrov passes the time reading love poems in his hammock; Marja takes up with 100-year-old Sidorow; Baba Dunja whiles away her days writing letters to her daughter... rural bliss reigns, until one day a stranger turns up in the village, and the small settlement faces annihilation once again. With her trade-mark wry humour Bronsky tells the story of a community that shouldn't exist, and of a very unusual woman who late in life finds her own version of paradise.

The summer of 1992 had been exceptionally cold in southern Italy. But that's not the reason why it is still remembered. On May 23, 1992, a roadside explosion killed the Palermo judge Giovanni Falcone, his wife and three police officers. A few weeks later judge Paolo Borsellino and five police officers were killed in the center of Palermo. These anti-mafia judges became heroes but the violence spread to the region of Bari in Puglia, where we meet a new, memorable character, Maresciallo Pietro Fenoglio, an officer of the Italian Carabinieri. Fenoglio, recently abandoned by his wife, must simultaneously deal with his personal crisis and the new gang wars raging around Bari. The police are stymied until a gang member, accused of killing a child, decides to collaborate, revealing the inner workings and the rules governing organised crime in the area. The story is narrated through the actual testimony of the informant, a trope reminiscent of verbatim theatre which Carofiglio, an ex-anti-mafia judge himself, uses to great effect. The gangs are stopped but the mystery of the boy's murder must still be solved, leading Fenoglio into a world of deep moral ambiguity, where the prosecutors are hard to distinguish from the prosecuted.

The book examines the major issues in perinatal clinical psychology with the presence of theoretical information and operational indications, through a biopsychosocial approach. The multiplicity of scientific information reported makes this book both a comprehensive overview on the major perinatal

mental health disorders and illnesses, and a clinical guide. It covers perinatal clinical psychology through a journey of 15 chapters, putting the arguments on a solid theoretical basis and reporting multiple operational indications of great utility for daily clinical practice. It has well documented new evidence bases in the field of clinical psychology that have underpinned the conspicuous current global and national developments in perinatal mental health. As such, it is an excellent resource for researchers, policy makers, and practitioners – in fact, anyone and everyone who wishes to understand and rediscover, in a single opera, the current scientific and application scenario related to psychological health during pregnancy and after child-birth.

Increasing numbers of children and adolescents are being diagnosed with nonverbal learning disabilities (NLD), yet clinicians and educators have few scientific resources to guide assessment and intervention. This book presents up-to-date knowledge on the nature of NLD and how to differentiate it from DSM-5 disorders such as autism spectrum disorder and developmental coordination disorder. Effective strategies for helping K-12 students and their families address the challenges of NLD in and outside of the classroom are illustrated with vivid case material. The authors thoughtfully consider controversies surrounding NLD, discuss why the diagnosis is not included in the current DSM and ICD classification systems, and identify important directions for future research.

Why bother to praise mathematics when you claim, as Alain Badiou does, that philosophy is first and foremost a metaphysics of happiness, or else it's not worth an hour of trouble? What possible relationship can there be between mathematics and happiness? That is precisely the issue at stake in this dialogue, which serves as a very accessible introduction to what mathematics is and an exploration of the crucial influence it has always exerted on the greatest philosophers. Far from the thankless, pointless exercises they are often thought to be, mathematics and logic are indispensable guides to ridding ourselves of dominant opinions and making possible an access to truths, or to a human experience of the utmost value. That is why mathematics may well be the shortest path to the true life, which, when it exists, is characterized by an incomparable happiness.

Over thirty years after Maurice Blanchot writes *The Unavowable Community* (1983)—a book that offered a critical response to an early essay by Jean-Luc Nancy on “the inoperative community”—Nancy responds in turn with *The Disavowed Community*. Stemming from Jean-Christophe Bailly’s initial proposal to think community in terms of “number” or the “numerous,” and unfolding as a close reading of Blanchot’s text, Nancy’s new book addresses a range of themes and motifs that mark both his proximity to and distance from Blanchot’s thinking, from Bataille’s “community of lovers” to the relation between community, communitarianism, and being-in-common; to Marguerite Duras, to the Eucharist. A key rethinking of politics and the political, this exchange opens up a new understanding of community played out as a question of avowal.

Rich case material illustrates applications for a wide range of clinical problems; assessment guidelines and sample worksheets and forms further enhance the book's utility.

Everybody wants to be creative. Creativity makes life more fun, more interesting and more full of achievement, but too many people believe that creativity is something you are born with and cannot be learned. In *How to Have Creative Ideas* Edward de Bono - the leading authority on creative thinking - outlines 62 different games and exercises, built around random words chosen from a list, to help encourage creativity and lateral thinking. For example, if the task were to provide an idea for a new restaurant and the random word chosen was 'cloak', ideas generated might be: a highwayman theme; a Venetian theme with gondolas; masked waiters and waitresses. Or, if asked to make a connection between the two random words 'desk' and 'shorts', readers may come up with: both are functional; desks have 'knee holes' and shorts expose the knees; traditionally they were both male-associated items. All the exercises are simple, practical and fun, and can be done by anyone.
