This informative and complex reference book is written by Dr. Karanjit Siyan, successful author and creator of some of the original TCP/IP applications. The tutorial/reference hybrid offers a complete, focused solution to Windows internetworking concepts and solutions and meets the needs of the serious system administrator by cutting through the complexities of TCP/IP advances.

This is an excellent tutorial for anyone wanting to pass the Microsoft, A+, or Cisco TCP/IP exam. It covers IPv4 subnetting in depth, such as how to construct the IPv4 subnet tables from the ground up. Additional chapter includes the new IPv6 standard. "Hi Everyone, I took my TCP/IP today with score of 948/1000, your exam preparation is excellent and good value for money. What I like about your test is the layout, dividing test into different topics, that way it is easy to spot your weak areas. I would recommend anyone out there to check your Test Prep before taking any Microsoft Exams." —Abdi Elmi "I had just appeared for the TCP/IP exam, and it was quite tough. Your questions proved to be very useful additional source besides my Sybex guide. My score, 879, though I expected in 900s." —Steven Chiu, Calcutta, India "Passed the Microsoft TCP/IP in the mid-nineties! Glad I had your tool." —Robert Vettor, U.S.A. "...As for TCP/IP, I made 965 which means I missed 2 out of 58. I was positive that two of the questions had no correct answers... As for your tutorial, it is the 'bomb'. I don't know if you know that term means where you live, but my 15 year old daughter uses it to refer to something that is excellent. I was totally prepared and did not see anything that the tutorial did not cover in detail. Keep up the good work!" —Jim Newton, U.S.A. "Thanks for your tutorial. You helped me pass TCP/IP and other MS Exams. Just wanted to say thanks, big time!! Thank you for your assistance in this matter." —John Devereaux, HP Computers

Starting with an overview of the TCP/IP theory, this book addresses the installation of TCP/IP products on each platform, and proceeds through configuration and troubleshooting each one. The book should enable the rader to choose, install, configure, interconnect, troubleshoot, and use TCP/IP.

When you first hear the term Information Assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it. In truth this is the Holy Grail that all organisations that val-

ue their information should strive to achieve, but which few even understand. Information Assurance is a term that has recently come into common use. When talking with old timers in IT (or at least those that are over 35 years old), you will hear them talking about information security, a term that has survived since the birth of the computer. In the more recent past, the term Information Warfare was coined to describe the measures that need to be taken to defend and attack information. This term, however, has military connotations - after all, warfare is normally their domain. Shortly after the term came into regular use, it was applied to a variety of situations encapsulated by Winn Schwartau as the three classes of Information Warfare: Class 1 - Personal Information Warfare. Class 2 - Corporate Information Warfare. Class 3 - Global Information Warfare. Political sensitivities lead to "warfare" being replaced by "operations", a much more "politically correct" word. Unfortunately, "operations" also has an offensive connotation and is still the terminology of the military and governments.

Designed for individuals taking the Microsoft Certified Systems Engineer (MCSE) exam, this book provides complete material for the MCSE Internet-working with Microsoft TCP/IP test and shows how to plan, create and administer TCP/IP networks on NT Server 4.0. TCP/IP (Transmission Control Protocol/Internet Protocol) is a set of communications protocols allowing computers of different types to communicate via a common language. TCP/IP forms the basis for the Internet and is increasingly used for corporate networks and internetworks.

TCP/IP is the de facto protocol of the Internet, and this protocol is supported by every major network operating system. As more organizations and individuals connect networks and computers to the Internet and one another, there is a growing demand for professionals to have a thorough understanding of this protocol suite. TCP/IP JumpStart Second Edition will explain the fundamentals of TCP/IP in simple terms with tangible examples. New for this edition: updates on Windows XP/2000, Dynamic DNS, CIDR, and subnetting.

Book includes authoritative coverage of exam topics. First CD includes an exam-preparation program, and the second CD includes live expert MCSE video instruction with hands-on exercises.

Most other certification books seek Microsoft approval, meaning they must include at least 50 percent tutorial material, and cover every objective for

every exam, no matter how frivolous or relevant to the actual exam. MCSE Fast Tracks break away from that mold by focusing only on what you really need to know. MCSE Fast Track: Networking Essentials features only what the more-experienced candidate needs to know to pass the exams. Each book in the Fast Track series has two parts. Part One contains all the information you need to know about the exam. It uses an easy-to-follow approach to drills you on exam-critical information. Written from an insiders perspective, its like having the trainers notes before the exam. Part Two features classroom-tested, instructor-proven review strategies, including Fast Fasts, Hotlists of Exam-Critical Concepts, Sample Test Questions, and the Insiders Spin. MCSE Fast Tracks are your accelerated path to MCSE success.
