One of Fuller's most popular works, *Operating Manual for Spaceship Earth*, is a brilliant synthesis of his world view. In this very accessible volume, Fuller investigates the great challenges facing humanity. How will humanity survive? How does automation influence individualization? How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide "spaceship earth" toward a sustainable future. \*\* NOTE \*\* While this edition is good value, there is a newer edition: The (Unofficial) Google Nexus 5 Smartphone Book - Second Edition, The Google-designed and LG-manufactured Nexus 5 is the first smartphone to run the Android 4.4 "KitKat" operating system. If you've just bought a Nexus 5 smartphone, or you're thinking about buying one, you should read this book. The ethos of the book is very much "What the Nexus 5 can do for you!", and it's an unofficial book because we have not colluded with the manufacturers (Google or LG) during the writing of the book...so we can say pretty much whatever we want. And if we say we like it, it's because we really do. But we're no "fan-boys", and we don't mind giving a warts 'n' all coverage where it's warranted. So whether you're so-far undecided, or have already purchased your Nexus 5...buy this book! Evaluates five manual post drivers suited for driving metal T-posts that are 8 to 10 feet long. Standard drivers can't be used for such long posts unless the operator stands on a ladder or in the back of a truck, practices that aren't practical in remote areas and aren't safe on steep terrain. Drivers for longer posts have long handles that allow the driver to be used by an operator standing on the ground. The drivers tested included the Standard-Signs Models NO4 and NO8, the Post Mate, and two drivers developed by the Missoula Technology and Development Center, the PD-1 and PD-2. The tech tip includes information on commercially available models and on two models designed by the Missoula center.

The Grumman F8F Bearcat was designed to defeat the nimble Japanese fighter aircraft that appeared at the end of WWII. The conflict ended before the Bearcat could be placed into service, and although it eventually saw combat with the French in the Indo-China war, it never flew in harm's way in the U.S. Navy. One of the best piston-powered fighters ever built, the F8F could achieve a cruising speed of over 420 mph. In 1946 a Bearcat set a time-to-climb record of 10,000 feet in 94 seconds, a feat not matched until the advent of high-performance jet fighters nearly a decade later. Originally printed by Grumman and the U.S. Navy, this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified "Restricted", the manual was declassified and is here reprinted in book form. This affordable facsimile has been slightly reformatted. Care has been taken however to preserve the integrity of the text.
