Nonlinear partial differential equation - Wikipedia

First-Order Partial Differential Equations the case of the first-order ODE discussed above. Clearly, this initial point does not have to be on the y axis. If the values of $u(x, y)$ on the y axis between a_1 and a_2 are given, then the values of $u(x, y)$ are known in the strip of the x - y plane with $a_1 < y < a_2$.

Linear PDEs can be reduced to systems of ordinary differential equations by the important technique of separation of variables. This technique rests on a characteristic of solutions to differential equations: if one can find any solution that solves the equation and satisfies the boundary conditions, then it is the solution (this also applies to ODEs).
