Il testo tratta degli argomenti fondamentali inerenti il progetto, la

verifica e l'esercizio dei sistemi elettrici di trasmissione e distribuzione dell'energia elettrica. Per quanto possibile le trattazioni teoriche esposte sono ottenute partendo dalla interpretazione fisica dei fenomeni e sono accompagnate da esempi numerici che hanno lo scopo di avvicinare ad una sensibilità parametrica. Il testo è rivolto agli allievi del II anno del corso di Laurea Magistrale in Ingegneria Elettrica ed Ingegneria Energetica, ma anche ai professionisti che operano nel campo di sistemi elettrici di potenza. Contenuti: introduzione al sistema di produzione, trasmissione e distribuzione dell'energia elettrica; calcolo delle reti elettriche in valori assoluti e relativi (p.u.), delle costanti primarie delle linee elettriche e loro criteri di dimensionamento; modelli in c.a. sinusoidale del macchinario elettrico e dei componenti di rete; metodi esatti ed approssimati di calcolo delle reti elettriche trifasi di potenza, in regime normale simmetrico diretto; calcolo delle correnti di corto circuito simmetriche e dissimmetriche, mediante le coordinate di fase e le componenti simmetriche; stato del neutro delle reti di AAT, AT, MT e BT; dispositivi di manovra, protezione e sicurezza; struttura, dimensionamento, esercizio e protezione delle reti di distribuzione pubblica in MT e BT; elementi di sicurez-

za elettrica.

SELECTED AS WATERSTONES BOOK OF THE MONTH SHORTLISTED FOR THE CARNEGIE AWARD A heart-breaking, heart-warming novel for everyone of 10 and older – this book will probably make you cry, and will definitely make you laugh.

Since the end of the XIXth century the dairy sectors of some industrialised European and American countries have experienced a phase of growth that took place at a different rate and in a different manner in each country. This book studies the factors behind this achievement and the strengths and weaknesses of the sector during the XXth century.

In 1922 the Fascist 'March on Rome' brought Benito Mussolini to power. He promised Italians that his fascist revolution would unite them as never before and make Italy a strong and respected nation internationally. In the next two decades, Mussolini set about rebuilding the city of Rome as the site and symbol of the new fascist Italy. Through an ambitious program of demolition and construction he sought to make Rome a modern capital of a nation and an empire worthy of Rome's imperial past. Building the new Rome put people to work, 'liberated' ancient monuments, cleared slums, produced new "cities" for education, sports, and cinema, produced wide new streets, and provided the regime with a setting to showcase fascism's dynamism, power, and greatness. Mussolini's Rome thus embodied the movement, the man and the myth that made up fascist Italy.

The original work presented in this thesis constitutes an important contribution to modern Cosmic Ray (CR) physics, and comes during one of the most exciting periods of this field. The first part introduces a new numerical code (DRAGON) to model the CR propagation in our Galaxy. The code is then used to perform a combined analysis of CR data, making it possible to determine their propagation properties with unprecedented accuracy. The second part is dedicated to a theoretical interpretation of the recent crucial experimental results on cosmic electron and positron spectra

(PAMELA, Fermi-LAT experiments). Using the tools developed in the first part of the thesis, the author convincingly argues for the existence of a new spectral component, which could arise either from local astrophysical sources, such as pulsars, or from Dark Matter annihilation or decay. This thesis is a highly advanced work; the methods, analysis and results are clearly and carefully presented. This work is set to become an important reference document for any future work in this area.

Progettare è un'arte ed è davvero necessario essere un po' artisti per riuscire a farlo correttamente. Quando si crea un progetto, diventa indispensabile immaginare tutto, preventivare ogni singola funzione, ogni comportamento, sia esso dell'utente o del sistema, ed è fondamentale anche specificare ogni variabile di interesse per avere un pieno controllo dell'intero ciclo di vita del progetto. Per raggiungere questi obiettivi bisogna comprendere completamente le richieste del cliente, tenersi al passo con i tempi e con la tecnologia. Essere innovativi è la grande sfida. In questo libro, comprenderemo meglio quali sono le sfide principali da affrontare durante la realizzazione di un qualsiasi prototipo elettronico. Nell'ultimo capitolo discuteremo di intelligenza artificiale e robotica, un tema di grande attualità. Il tutto, ovviamente, mediante esempi pratici e prototipi di casi reali.

The mountain couldn't come to Wolfe, so the great detective came to the mountain—to *Lame Horse*, Montana, to be exact. Here a city slicker got a country girl pregnant and then took a bullet in the back. Wolfe's job was to get an innocent man exonerated of the crime and catch a killer in the process. But when he packed his silk pajamas and headed west, he found himself em-

broiled in a case rife with local cynicism, slipshod police work, and unpleasant political ramifications. In fact, Nero Wolfe was buffaloed until the real killer struck again, underestimating the dandified dude with an unerring instinct for detection. Introduction by Don Coldsmith "It is always a treat to read a Nero Wolfe mystery. The man has entered our folklore."—The New York Times Book Review A grand master of the form, Rex Stout is one of America's greatest mystery writers, and his literary creation Nero Wolfe is one of the greatest fictional detectives of all time. Together, Stout and Wolfe have entertained—and puzzled—millions of mystery fans around the world. Now, with his perambulatory man-about-town, Archie Goodwin, the arrogant, gourmandizing, sedentary sleuth is back in the original seventy-three cases of crime and detection written by the inimitable master himself, Rex Stout.

Providing a methodology for evaluating indoor thermal comfort with a focus on children, this book presents an in-depth examination of children's perceptions of comfort. Divided into two sections, it first presents a history of thermal comfort, the human body and environmental parameters, common thermal comfort indexes, and guidelines for creating questionnaires to assess children's perceptions of indoor thermal comfort. It then describes

their understanding of the concepts of comfort and energy, and the factors that influence that perception. In this context, it takes into account the psychological and pedagogical aspects of thermal comfort judgment, as well as architectural and environmental characteristics and equips readers with the knowledge needed to effectively investigate children's perspectives on environmental ergonomics. The research field of indoor thermal comfort adopts, on the one hand, physical parameter measurements and comfort indexes (e.g. Predicted Mean Vote (PMV) or adaptive comfort), and on the other, an ergonomic assessment in the form of questionnaires. However the latter can offer only limited insights into the issue of comfort, as children often use different terms than adults to convey their experience of thermal comfort. The book aims to address this lack of understanding with regard to children's perceptions of indoor thermal comfort. The book is intended for HVAC engineers and researchers, architects and researchers interested in thermal comfort and the built environment. It also provides a useful resource for environmental psychologists, medical and cognitive researchers.

This volume contains the text of the three Cook Lectures, which review various current doubts and queries concerning the writing of reasonably unbiased history.

Ada Gobetti's Partisan Diary is both diary and memoir. From the German entry into Turin on 10 September 1943 to the liberation of the city on 28 April 1945, Gobetti recorded an almost daily account of events, sentiments, and personalities, in a cryptic English only she could understand. Italian senator and philosopher Benedetto Croce encouraged Ada to convert her notes into a

book. Published by the Italian publisher Giulio Einaudi in 1956, it won the Premio Prato, an annual prize for a work inspired by the Italian Resistance (Resistenza). From a political and military point of view, the Partisan Diary provides firsthand knowledge of how the partisans in Piedmont fought, what obstacles they encountered, and who joined the struggle against the Nazis and the Fascists. The mountainous terrain and long winters of the Alpine regions (the site of many of their battles) and the ever-present threat of reprisals by German occupiers and their fascist partners exacerbated problems of organization among the various partisan groups. So arduous was their fight, that key military events--Italy's declaration of war on Germany, the fall of Rome, and the Allied landings on D-Day --appear in the diary as remote and almost unrelated incidents. Ada Gobetti writes of the heartbreak of mothers who lost their sons or watched them leave on dangerous missions of sabotage, relating it to worries about her own son Paolo. She reflects on the relationship between anti-fascist thought of the 1920s, in particular the ideas of her husband, Piero Gobetti, and the Italian resistance movement (Resistenza) in which she and her son were participating. While the Resistenza represented a culmination of more than twenty years of anti-fascist activity for Ada, it also helped illuminate the exceptional talents, needs, and rights of Italian women, more than one hundred thousand of whom participated.

This work focuses on regularity theory for solutions to the p-Laplace equation in the Heisenberg group. In particular, it presents detailed proofs of smoothness for solutions to the non-degenerate equation and of Lipschitz regularity for solutions to the degen-

erate one. An introductory chapter presents the basic properties of the Heisenberg group, making the coverage self-contained. The setting is the first Heisenberg group, helping to keep the notation simple and allow the reader to focus on the core of the theory and techniques in the field. Further, detailed proofs make the work accessible to students at the graduate level.
