Data Masters | Be the master of your data!

Master Data Management (MDM) is the technology, tools and processes that coordinate your master data across the enterprise. It provides a unified master data service to obtain an accurate, consistent and complete master data across the organization. A master data management solution must have a Multi-Domain characteristic.

Andy Graham is the Plato of Data Architecture. 'Mastering Your Data' is essential reading for anyone considering embarking on a master data management project. The author shares his wealth of knowledge, real project experience and insight with the reader. Bad grammar and spelling mistakes are frequent.

Depending on how your MDM implementation is designed, you might have to change the systems that produce, main-

tain or consume master data to work with the new source of master data. If the master data is used in a system separate from the source systems—a data warehouse, for example—the source systems might not have to change.

Data Masters | Be the master of your data!

Data mastering is the process by which an unmastered data source record is linked or merged with another master data record. The data mastering process can either result in the creation of a new master data record, or the source data record is linked to an existing master data record. The data mastering process can be explicitly initiated by the user or automatically initiated by the system.
