Week 1: Oceans and Climate > Topic 1g - Measuring sea ice retreat Along with a gradual warming of the oceans, melting of the Greenland and Antarctic ice sheets are main contributors to the sea level rise of our oceans.

Paolo Corradi and Luca Maresi had the same idea: tracking plastic trash from space.. Corradi, an engineer with the European Space Agency's (ESA) optics division in the Netherlands, had been hearing about plastic marine litter from a friend at a nonprofit working on the issue.Maresi, Corradi's boss, had seen the problem firsthand during sailing trips.

ESA plans to measure ocean plastic data from space. Until now, researchers have used satellite maps to simulate the accumulation of marine trash, but the new project would use direct optical measurements to provide actual data on the scale of the issue.

Measuring the Oceans From Space Martin, Seelye; Abstract. Given the growth in the number and complexity of ocean satellite systems since the launch of Seasat in 1978, combined with the fact that about twenty-five countries are now involved in such observations, this is an appropriate time for a new book on satellite oceanography (Disclosure ...

Measuring phytoplankton from space. It's windy, it's cold, it's covered in ice and clouds most of the time. When the sun does come out, it remains low in the sky and distant. These factors make it a difficult environment for organisms like phytoplankton (microscopic marine plants) that use light to photosynthesise,...
