Medical interpreters need words, but it's not always easy to find them or to predict the ones you'll need for an assignment. Cynthia Maulen, who has trained interpreters who speak more than fifty different languages, created this terminology workbook to help interpreters prepare for a variety of assignments and certification exams. The workbook identifies terms used in a variety of medical settings and is arranged by topic, including categories rarely seen in other interpreting texts, such as Abbreviations, U.S. Healthcare Terminology, Medications, and Talking About Pain. You can write in your own translations and create your own glossary no matter what language you're working in. Maulen also uses her extensive interpreting knowledge and down-to-earth approach to provide proven guidance on dealing with the challenges you'll face on the job as an interpreter. Whether you're an educator seeking to supplement your curriculum, a student determined to pass an exam, or a professional eager to do the best job you can, you'll get the tools you need to accomplish your goals with the Terminology Workbook for Medical Interpreters.

When healthcare providers and patients do not speak the same language, medical interpreters are called in to help. In this book - the first ever ethnographic study of a bilingual hospital - Claudia Angelelli explores the role of medical interpreters, drawing on data from over 300 medical encounters and interviewing the interpreters themselves about the people for whom they interpret, their challenges, and how they characterize their role. Traditionally the interpreter has been viewed as a language conduit, with little power over the medical encounter or the relationship between patient and provider. This book presents an alternative view, considering the interpreter's agency and contextualizing the practice within an institution that is part of a larger society. Bringing together literature from social theory, social psychology and linguistic anthropology, this book will be welcomed by anyone who wants to discover the intricacies of medical interpreting firsthand; particularly researchers, communication specialists, policy makers and practitioners.

This work is the definitive international textbook for community interpreting, with a special focus on medical interpreting. Intended for use in universities, colleges and basic training programs, the book offers a comprehensive introduction to the profession. The core audience is interpreters and their trainers and educators. While the emphasis is on medical, educational and social services interpreting, legal and faith-based interpreting are also addressed.

"Testing and Assessment in Translation and Interpreting Studies" examines issues of measurement that are essential to translation and interpreting. Conceptualizing testing both as a process and a product, the collection of papers explores these issues across languages and settings (including university classrooms, research projects, the private sector, and professional associations). The authors have approached their chapters from different perspectives using a variety of methods, some focusing on very specific variables, and others providing a much broader overview of the issues at hand. Chapters range from a discussion of the measurement of text cohesion in translation; the measurement of interactional competence in interpreting; the use of a particular scale to measure interpreters' renditions to the application of a specific approach to grading or general program assessment (such as interpreter or translator certification at the national level or program admissions processes). These studies point to the need for greater integration of research and practice

in the specific area of testing and assessment and are a welcome addition to the field."

Many people have the need to take notes: interpreters, attorneys, health care providers, and students, among others. Some try to learn short-hand, a complex system which requires several months (even years) of practice to master. There is a widely unknown but simple alternative to take notes more clearly and efficiently. Jean François Rozan and Andrew Gillies, two pioneer conference interpreters, provide techniques to significantly streamline note-taking. Although originally created for interpreters, these practical guidelines are extremely helpful to anyone who takes notes. The Note-Taking Manual will help you master note-taking symbols as well as Rozan and Gillies' techniques. You will acquire up to 40 new symbols through dictations (available as free audio files at www.interpretrain.com/audio). Each exercise offers a sample of notes to compare with your own and discover additional tips. These educational tools will help you become the best interpreter and/or note-taker you can be. For best results, please see Interpreter's 10 Lessons to Excel at Consecutive Interpretation. Our multimedia training package is composed of videos, audio, and two manuals to help you master consecutive interpretation. The program takes you step-by-step

Interpreters who work with signed languages and those who work strictly with spoken languages share many of the same issues regarding their training, skill sets, and fundamentals of practice. Yet interpreting into and from signed languages presents unique challenges for the interpreter, who works with language that must be seen rather than heard. The contributions in this volume focus on topics of interest to both students of signed language interpreting and practitioners working in community, conference, and education settings. Signed languages dealt with include American Sign Language, Langue des Signes Québécoise and Irish Sign Language, although interpreters internationally will find the discussion in each chapter relevant to their own language context. Topics concern theoretical and practical components of the interpreter's work, including interpreters' approaches to language and meaning, their role on the job and in the communities within which they work, dealing with language variation and consumer preferences, and Deaf interpreters as professionals in the field.
