'A powerful book' Shashi Tharoor 'A must-read' Vandana Shiva A terrifying investigative account of a global corporation's role in perpetrating India's greatest mercury poisoning catastrophe. In 2001, a Hindustan Unilever-owned thermometer factory in Kodaikanal, Tamil Nadu, made national headlines when a massive dump of broken mercury thermometers was discovered at a local scrapyard. As the multinational corporation conducted one hasty internal assessment after another to save face, state authorities discovered that the company had violated all acceptable guidelines for toxic waste disposal measures, causing grievous harm to its workers' health and the region's fragile ecosystem. As evidence of mercury poisoning among workers mounted, the local community - aided by environmental watchdog Greenpeace and various public-interest organizations - launched a battle against the multibillion-dollar conglomerate that would last fifteen years, culminating in an undisclosed settlement paid to 600 of its ex-employees. And despite the factory's closure, scientific reports would reveal mercury levels to be 1,000 times higher than the safe limit, raising serious concerns about HUL's toxic legacy in the hill station. For years, Ameer Shahul, a former investigative reporter and Greenpeace campaigner, closely tracked the Kodaikanal mercury poisoning case. The result is Heavy Metal, a blistering account of a colossal industrial tragedy precipitated by corporate negligence and acts of omission and commission at the highest levels.

The authors provide readers with an overview of the unique features of German business and enterprise law and an in-depth analysis of the organs of governance of German public limited companies (general meeting, management board, supervisory board). In addition, approaches for reforms required at the international level are also suggested and discussed, including, among others, the unique interplay and dynamics of the German two-tier board model with the system of codetermination, referring to the arrangement of employees sitting on the supervisory boards of German public limited companies and private companies employing more than 500 employees; also covered are significant recent legal developments in Europe. The book highlights the core function of valuation and financial reporting at the international, European and German levels, with accounting as the documentary proof of good corporate governance. It also expands the scope of the first edition by a treatment of the German financial sector, global corporate finance and governance, and by including a new chapter on compliance of corporate governance laws, rules and standards in Germany. Both banks and insurance companies are financial intermediaries. However, their functions are different. An insurance company ensures its customers against certain risks, such as the risk of having a car accident or the risk that a house catches on fire. In return for this insurance, their customers pay them regular insurance premiums. Banks accept short-term deposits and make long-term loans. This means that there is a mismatch between their liabilities and their assets. In case a large number of their depositors want their money back, for example in a bank run scenario, they might have to come up with the money in a hurry. For an insurance company, however, its liabilities are based on certain insured events happening. Their customers can get a pay-out if the event they are insured against, such as their house burning down, does happen. They don't have a claim on the insurance company otherwise. In today's competitive banking industry, institutional banking is attracting greater interest. Under the globalization umbrella, inter-bank business is undergoing dynamic change and is transcending the boundaries of traditional correspondent banking. In today's climate, no bank, regardless of size, can grow without the cooperation of other banks and no bank can hope to survive and prosper without utilizing emerging markets. Institutional banking in emerging countries has some unique functions: for example, problem solving is heavier and more crucial in emerging markets than in developed countries, given the irregularity of the market and non-transparency of the financial/legal systems. Moreover, it is particularly necessary to forge good relationships, day-to-day contact and personal communication, to provide better chances for product marketing and risk management. Products are therefore tailor-made and adapted as the situation dictates, a successful lesson for one case in one country cannot necessarily be repeated in another. Huang provides a systematic framework for the subject combining both principles and practice. The direct experience of the author, allows him to write authoritatively about the subject with academic vigour as well as a large amount of practical knowledge which only a practitioner can provide. The book contains numerous real life examples and case studies to allow the reader an insight into how Institutional Banking actually works in the real world. The book also contains a supplementary CD which includes chapter summary's and further information. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

Markets and Ideology in the City of London is the first fieldwork-based sociological study of how participants in City of London financial markets view the markets in which they work and the market mechanism in general. But it is more than a narrow study of financial market participants because it is also an empirical investigation into how ideologies function and it develops a critique of pro-market ideologies such as 'Thatcherism'. Finally, it is one of a small number of sociological studies into the privileged world of high earners and the wealthy - sociologists too frequently study the powerless and the 'deviant' or 'marginal' groups.
