Microbial Diseases Of The Digestive

Viral hepatitis is most commonly caused by the hepatitis A virus (HAV), hepati-

tis B virus (HBV), and hepatitis C virus (HCV). These three viruses can all result in acute disease with symptoms of nausea, abdominal pain, fatigue, malaise, and jaundice. Additionally, acute infection with HBV and HCV can lead to chronic infection. The GI tract is subject to infection by many pathogens, which are a major cause of economic loss due to illness, suboptimal performance, and death (see Table: Common Infections of the Gastrointestinal Tract). These infections spread by direct contact or the fecal-oral route.

The digestive system made up of the gastrointestinal tract (GI), liver, pancreas, and gallbladder

helps the body digest food. Digestion is important for breaking down food into nutrients, which your body uses for energy, growth, and cell repair. Some digestive diseases and conditions are acute ...

Bacterial Diseases of the Digestive System

Viral gastroenteritis is a general expression for viral infection of the intestine. A major cause is the rotavirus, a virus transmitted by the fecal-oral route and capable of causing severe diarrhea. Dehydration may be a problem in patients, and antiviral therapies are generally inadequate.

Crohn's disease is a chron-

ic intestinal disease which is difficult to identify. It damages all the digestive system but especially the small intestines. It is more common among Jews. It appears usually between the ages of 14 and 24 and is due to an unknown cause.
