Manual:IP/Firewall—MikroTik Wiki

The firewall implements packet filtering and thereby provides security functions that are used to manage data flow to, from and through the router. Along with the Network Address Translation it serves as a tool for preventing unauthorized access to directly attached networks and the router itself as well as a filter for outgoing traffic.

Basic guidelines on RouterOS configuration and ...—MikroTik

Winbox is a small utility that allows administration of MikroTik RouterOS using a fast and simple GUI. It is a native Win32 binary, but can be run on Linux and MacOS (OSX) using Wine. All Winbox interface functions are as close as possible mirroring the console functions, that is why there are no Winbox sections in the manual.
